NEWS IN BRIEF

Low Threshold response

POOR response to advertisement for Threshold computer training course in the Bristol area have caused NCC staff serious difficulty in getting courses organised. A newspaper campaign had to be repeated before the necessary 45 young people had applied so that a single course of 16 could be filled. The pass rate for the aptitude test is about one in three.

This is despite unemployment of 5,000 teenagers in Avon, but plenty of white-collar vacancies.

GA sues ex-boss

THE legal slugging match between General Automation and ousted president Larry Goshorn is hotting up. Following Goshorn's second suit against them alleging that he was barred from GA premises (CW, July 5), the directors are suing Goshorn, saying he wasted corporate assets on personal road and air travel.

DEC price cuts

PRICE cuts ranging between 11% and 50% have been announced by the Digital Equipment Corp for add-on MOS memory for PDP-11/34A, 11/70 and Vax-11/780 computers.

Outrigger Times?

STEADY progress has been made in talks at The Times with some print unions, allowing for staff cuts and a dispute procedure as asked for by the management, while other difficulties persist, such as what will happen to management members of the NGA who crossed picket lines. The Times wants a "no victimisation" agreement to apply on both sides. Staff remain optimistic that publication could restart in October 1.

ICL may be reported to Monopolies Commission

THE Office of Fair Trading is close to referring ICL to the Monopolies and Mergers Commission. The move follows complaints from several independent suppliers of used ICL computers and ICL-compatible equipment, about ICL's alleged monopolistic practices.

If the OFT goes ahead it will ask the Commission to look into the whole computer market rather than ICL specifically, because it is not allowed to refer one named company to the Commission.

Under definitions in the 1967 Fair Trading Act, a monopolistic situation can exist if one company holds at least one quarter of a particular market and prevents, distorts or

restricts competition in the supply of goods or services.

The OFT has been looking into the ICL case for some time (CW, June 23, 1977). Used ICL computer vendors, Reliance Computer Brokers and Computer Resale Brokers, have complained about ICL's refusal normally to maintain machines at second user sites if they are more than seven years old.

Systems Reliability Ltd and Teknos Management, which build add-on memory and plug compatible disc subsystems, respectively, for ICL machines, complained about the technical and pricing obstacles that ICL has constructed to discourage or prevent users from installing their kit. One

particular cause of discontent has been the 20% compensatory levy that ICL demands from users that install their kit, a policy which ICL has doggedly refused to change.

Teknos and Systems Reliability have also complained to the EEC Commission's Directorate of Restrictive Practices and Abuse of Dominant Positions about ICL policies (CW, September 21, 1978).

If ICL is found to be infringing articles 85 and 86 of the Treaty of Rome ICL could not only be forced to change its policies; it could also be fined up to 10% of its previous year's turnover — more than £500 million last year. ICL would have the right of appeal to the European Court of Justice.

Magnuson in UK ahead of schedule

THE IBM-compatible M80 series of miniframes built in the US by Magnuson Computer Systems is now being offered to the general IBM computer using community in the UK by Magnuson ATC, the independent agency set up late last year to sell Magnuson machines to the European air transport industry.

Magnuson ATC said that general marketing of M80s in the UK was originally intended to start in September, following the formation of a Magnuson subsidiary, Magnuson Ltd, but the level of interest in M80s was now so high that Magnuson ATC had decided to handle general sales itself.

Magnuson ATC is currently looking for a large software house with substantial IBM experience to provide Magnuson users with systems engineering support, and Data Logic is considered to be the most attractive proposition. Data Logic confirmed that negotiations with Magnuson ATC had started, but emphasised that any agreement that might be signed was at least one month away.

Data Logic has considerable

experience in IBM 370 project implementation through its professional services division, which has offices in London, Manchester and Birmingham.

Magnuson ATC is currently also evaluating third party maintenance companies, and says that it will probably sign agreements with two of them.

IBM seeks \$1,500m loan

UNDERLINING the difficulty of running even a company as strong and successful as IBM, second-quarter net profit fell 3.4% to \$667 million — and IBM is seeking to borrow up to \$1,500 million only a year after spending \$1,340 million buying its own shares.

After the 3030 series, which generated an embarrassingly higher level of orders than IBM anticipated, the company hoped to match supply to demand with the 4300s. But in the US, deliveries are spread over three years and in the UK, anyone ordering a 4331 this week would

get it in two years, and a 4341 in 2½ years.

IBM's reserves have fallen from over \$6,000 million in 1976 to \$2,000 million at March 31. For the first time since 1967, the company is seeking to open lines of credit with a number of banks and wants the money to finance increased production.

The second-quarter profit decline is the first since 1975 and surprised Wall Street, where the stock fell \$1.50 to \$70.125 on the news. IBM attributed the decline primarily to the trend towards leasing, but leasing revenues rose only 8.3% in the second quarter.

Racal into automated office

From front pages

management system, and a system for telephone operators which provides the information necessary to enable operators to direct incoming calls to the right person and find a substitute if necessary.

The dental management system looks after patient records, NHS accounts and patient billing, and even handles limited graphics for displaying charts.

Racal has a major need for intelligent terminal systems within its own operating companies, and development of these will be one of the first tasks of the new company.

Peter Hare, who joined Racal

from ICL some years ago, will be director in charge of Racal Information Systems.

"Although we shall be looking for plenty of business from large companies which are already Racal-Milgo customers for communications equipment, we shall also be selling to small companies."

"We do not intend to go round knocking on doors; we shall be exhibiting at the International Business Show in Birmingham, and expect that in general inquiries will come to us," he told Computer Weekly.

The terminals division in the US will not become part of the new company in the foreseeable future.

More matter with less art.....

IT isn't just the technical side of computing that baffles outsiders. Our business seems to have developed a politics all of its own that seems quite inappropriate to the mundane nature of the subject — at least in the view of Douglas Ginsburg, a lecturer at Harvard Law School.

Ginsburg has written to the Wall Street Journal pointing out the ironic juxtaposition of two stories, one about the value of art as an investment and the other about the fracas over IBM's lottery for 4300 machines (CW, July 12). He was puzzled that art should be bought and sold according to the principles of supply and demand while computers were not.

Why, asked Ginsburg, should there be a straightforward marketplace approach to art, which moves men's souls, and something else to allocate the computers that move their transactions? Why does not

IBM sell 4300s according to the price system, simply by letting the price rise until fewer people want them?

He goes on to ask, "Is it that IBM, and presumably other enterprises of its stature in the market, are now forced, by political realities, to act as political beasts rather than profit maximisers? If so, why?"

Certainly the politics of IBM-baiting in the US I find totally mind-boggling, what with one group trying to force Big Blue to disclose its plans (to help the competition anticipate them) and another group trying to force IBM to keep everything secret (so as not to attract the other firms' customers).

However, it is funny that it did not occur to Ginsburg that IBM is in fact maximising its profits long-term with the ballot, by hanging on to its customers. It seems that Life is beginning to imitate Art.

Look here upon this picture

IN the computer Press we have a continuing problem in trying to find interesting pictures to brighten up the paper. After all, one computer looks very much like another, and as time goes by their outside appearances seem to get more and more boring. The IBM 4300 looks like nothing so much as an electric storage heater.

We eschew printing endless photos of the same concrete and glass buildings taken from different angles. But nevertheless we are not helped in our efforts by many of the pictures that are sent to us. I think the one shown here wins the prize for the Most Boring Photograph of the Year so far. I would not be surprised if another one surpasses it before 1979 is out.

I suspect the photographer is a student of the recently-

fashionable school of Minimal Art — black squares on dark brown canvases and so forth. The less information there is in the picture, the better. Mind you, there are limits. A screenplay writer of my acquaintance once wrote a shot into a (black and white) film script: "Pan to a cloudless sky." On reading it over, he thought better of that one!

Coinage of a brain

HERE'S something to reflect on the next time you get worried about machines being taken over by humans. A friend who still braves the vegaries of London Transport (ecologically-minded Chad has just started coming to work on

a bicycle — smirk) reports seeing the following sign at St James's Park Underground station:

London Transport regrets that the automatic ticket machines are not working owing to staff shortage.

Expert systems pose a new sort of problem

By Robin Webster

Multi-role expert systems could revolutionise the teaching profession by providing a far more individualised service to the student. But the problems to surmount are great and the vast spectrum of human potentialities remains one of the greatest. To discuss the advances and remaining dilemmas a conference on expert systems was held at Edinburgh University earlier this month. ROBIN WEBSTER reports.

WHEN the noted mathematician Alan Turing pondered the controversial question "Can a machine think?" he discovered that it held too many ill-defined dimensions.

So instead of tackling it in the conventional style of his time, he rephrased the supplementary question: "Do we actually know what we mean when we use words like 'think' or 'intelligence', are we actually sure of our definitions?"

A similar inquiry can be made in terms of education by asking "Can a machine teach?"

Like the first question, the above needs refinement, and so we must see whether our understanding of what it is "to teach" is sufficient. In the absence of any undisputed theory of teaching it seems that we do not. And while various teaching models have been constructed and tested, it appears that we are a long way off from a generalised teaching computer.

Indications of where we stand with regard to progress in this area were to be found at Edinburgh University earlier this month, when the Society for Artificial Intelligence and Simulation of Behaviour held a conference on Expert Systems (CW, July 19).

An expert system, as described by Donald Michie of Edinburgh University, is essentially a "computing system which embodies organised knowledge concerning some specific area of human expertise... sufficient for it to be able to do duty as a skilful and cost-effective consultant".

It has three modes of operation. One is when it supplies a user or client with answers to problems; another is when the user enhances or increases the system's knowledge by acting as a tutor; and finally, when the expert system is used in teaching mode, making use of its accumulated data.

At this conference, Michie gave an example of how expert systems could provide more intuitive teaching in the future. It was found that when a particular chess and game program was back-translated into readable English paragraphs it proved to be of more help to the amateur than a text written by a chess master.

"The reason for this appeared to be that the master tends to write for a player who already has some concept of the move he is being asked to do," explained Michie, "whereas the back-translation proved to be a good crib for the learner because it gave a more complete picture of the procedure."

One factor that must be introduced into future systems, added Michie, is that of a "human window" so that the computer's inner workings can be considered.

Between the two extremes of a system which does a lot of computing and has a small amount of memory, and another which does little computing but has a large memory, Michie showed that there was a "window" where system operations become human-intelligible and human-executable.

He told the following anecdote as an example of why it would be necessary to have this.

Two chess masters were to pit their combined expertise against a solo computer program. They had a King and Queen while the computer controlled only a King and Rook. Play began and it was only a short way into the match when the computer did something very unexpected — it separated its Rook from the King; a move expert players

would deem incorrect and possibly fatal.

The psychological effect on the two human players was impressive. They played vainly for another 30 minutes before deciding to retire from the game.

"Afterwards they were asked what they had felt when the computer made the unusual move," said Michie, "and they replied that it seemed counter-intuitive, hostile, almost alien... and, in fact, downright suicidal."

In this case, the computer program used a viable but unconventional tactic to confuse its opponents; but transfer the sequence of events in an air traffic control centre, and the image is much more complex.

What would happen if an air traffic controller, for example, observed a computer taking a very unusual action? Should he override the move, or reason that the system was handling the situation in an outrageous but correct manner? Indeed, without Michie's "human window" would he be able to comprehend the logic employed by the computer before the point where an irreversible error was about to be made, and so make a competent attempt to correct it?

"We have to be careful of representations that are possibly dangerous and which are brought about purely by the demands of machine optimisation," cautioned Michie.

Commenting on the need for a human window, Tim O'Shea, a lecturer in education techniques at the Open University, said that it would be very elusive.

"It seems to me unlikely that we will attain such a factor for at least another couple of decades," he said. "Nor will we see generalised computer assisted instruction systems that soon. There will probably be many systems, each of use to a specialist group."

O'Shea classed computer scientists among those who

would benefit, but the thrust of what he said during the conference was the nature of human nature is extremely difficult to assess.

"In developing a system, University of Texas to test students quadratic equations found this to be the stumbling block," he said. "Indeed teach them the procedures involved, but as users were far too variable in their performance."

"Also, there was another factor in the situation. I programmed the system to process information from the sides they used it, so that as it learned more and more automatically, this did give to a 'look, no hands' moment, however, as I left it to do the thing itself."

A successful system which discussed was Sophie, which a peculiar semantic grammar that it only deals with power system trouble-shooting.

Developed at a research centre in Boston with US Navy funding it sets theoretical power system problems with special units; circuits that can be malfunction. The user is to trace and repair the circuit of interactive questions.

"If the student is ever inaccurate, Sophie does the reasoning behind the attempts," said O'Shea.

This is achieved by a program which is said to be necessary for a computer to know if the particular correct one before it reacts with that environment. An example of this is the robot system that is given the task of picking up, say, a wooden block as opposed to a red block that has a "nearby" have to be moved.

Such steps are not taken the attempt has failed then this can lead to all sorts of trouble.

There is the tale of Stanford University's robot that had not been programmed with an awareness of its own structure and about destroying itself in a room it occupied.

Or as Dr Pat Hayes of the University, reported in a conference, there was a robot that was given the task of finding that there was a problem in the room because of technical difficulties.

Both Hayes and speaker John McCarthy of Stanford University were to overcome the "problem" and other machine logic.

COURSE

EUROMICRO, the European Association for microprocessing and microprogramming, is organising its sixth annual symposium, called Euromicro 80. This will be held in London, and workers in the field of microprocessing and microprogramming are expected to exchange ideas on the latest developments. The programme will consist of three sessions: scientific, industrial, and

International Federation of Information Providers mooted

VIEWDATA and videotex information providers should promote standards that lead to compatibility between systems, encourage the unrestricted flow of electronic information between countries and stimulate the growth of cheap, easy-to-use systems.

This was agreed by 13 interested parties who met in Zurich this month to propose an International Federation of Information Providers' Associations. They included three members of AVIP.

The Association of Viewdata Information Providers based in the UK, and members of equivalent organisations in Switzerland and Canada.

SVIPA, the Swiss Viewdata Information Providers' Association, was formed about four months ago by 40 firms that were interested in providing information for the pilot trial to be launched in October by the Swiss PTT. Participation in the trial is to be limited to 70 organisations, to suit the 16 port GEC 4070-based

system. Association members so far include publishers, a department store and a hotel group, as well as Swissair, Nestle and Reuters.

The Canadian group is tentatively called the National Association of Videotex Service Providers, and field trials will begin later this year.

The word "service" in the title reflects the intention that information will not be the only service provided over videotex. French and German delegates to the

Zurich meeting were urged to form national IP groups, so that the international body could consist entirely of federated national associations.

The organisation is to be registered in Switzerland, but its next meeting is planned for London in the autumn. It is hoped to attract further countries where videotex is being developed, and to provide for the exchange of information between members and copyright protection of the contents of databases.

Graphics giant set up by triple merger

A FORMIDABLE computer graphics manufacturer with a complete range of graphics products should be fully established by the end of the year following the acquisition of Calcomp by Sanders Associates (CW, May 17).

Apart from the highly sophisticated graphics display systems of Sanders, and the display and open plotter products of Calcomp, the new enterprise will also be manufacturing and selling the electrostatic printer/plotters built at the moment by the Instruments division of Gould Inc.

Calcomp has come to a definitive agreement with Gould to

acquire its electrostatic products, and the deal has the full approval of Sanders.

It should be completed very shortly and, by next year, the manufacture of the Gould products will have been moved from Cleveland, Ohio, to Anaheim, California, the location of Calcomp's headquarters.

The Calcomp acquisition is consistent with its policy of concentrating on its graphics products business following the sale of its OEM disc drive manufacturing operation to Xerox (CW, November 9, 1978).

Calcomp's sales of graphics products were worth about \$50 million in its 1978 fiscal year.

The turnover of Sanders Associates in 1978 was \$150 million, although a large proportion of this sum came from military electronics and radar equipment.

On the DP side, Sanders builds a system called the Graphic 7. It also developed the 3250 graphics system for IBM.

Since it sold its Data Systems division to Harris (CW, February 17, 1977) Sanders has had no marketing operation in Europe.

Calcomp in Europe cannot say when it will be selling the Sanders systems over here but it already knows the Gould electrostatic product line very well.

A SATISFIED Ital customer is Peter Merrick, managing director of the Lowndes-Alax data services organisation, the first UK firm to install an IBM compatible Intel 8070/7031.

The 7031 more than matches the power of an IBM 3031, and Merrick said he was delighted with the outcome of the Lowndes-Alax decision to install the Intel machine. It was installed and running within a week of L-A signing the contract with Intel.

The 7031 has replaced an IBM 370/155 and works alongside the bureau's 370/155 Attached Processor system. The Intel machine is being used as the main processor for L-A's interactive teleprocessing services, which include financial planning and personnel information services. The 7031 runs under MVS with TSO, the financial planning package, Simplan, and the interactive database software, System 2000.

US-based micro software wholesaler plans UK launch

THE quality and variety of business software available in the UK for micros could get a fair-sized boost from next month when Lifeboat launches its UK operation. Set up two years ago in New York City by expatriate Englishman Tony Gold, Lifeboat acts as a marketing, support and distribution operation for soft-

ware to run under the CP/M floppy disc operating system on a wide variety of microcomputer systems.

UK director Mark Potts said that accounting packages had been produced for the UK market by a London micro software house called Graffcom.

But the bulk of the products

come from the US, from software houses such as Digital Research, which produced CP/M, and Microsoft which has produced 4K, 8K and disc extended versions of Basic — regarded as industry standards, and said to be installed in 200,000 machines.

Products from five or six main suppliers are supplemented by material sent in unsolicited, which Lifeboat checks out and provides documentation for.

Prices start at £25 to £30 for simple text processing programs, although one or two editing routines sell separately for £6. In the middle range, a link loading Fortran compiler costs

£225, and at the top end applications packages go up to £400.

Software interfaces have been developed to enable all the operating systems, languages and applications to run on about 50 different machines.

Lifeboat's London office is expected to open late next month at 32 Neil Street, WCI.

£225, and at the top end applications packages go up to £400.

Software interfaces have been developed to enable all the operating systems, languages and applications to run on about 50 different machines.

Lifeboat's London office is expected to open late next month at 32 Neil Street, WCI.

POWER NEEDS A HARNESS

The Harness

Minicomputers are now challenging mainframes for sheer performance. But computing power is of little use unless it can be easily applied to the problem in hand.

With Perkin-Elmer 16 and 32-bit software, you can really harness a price/performance combination that is unbeatable.

The extensive list of mature, field-proven software products includes the outstanding OS/16 and OS/32 real-time, multi-tasking operating systems, COBOL, FORTRAN, BASIC, MTM for multi-terminal program development, ITAM for data communications and a HASP emulator.

For Commercial Applications, there's the newly released REMANCE, a complete software system for implementing transaction processing on Perkin-Elmer 32-bit Superminis, comprising an Integrated Transaction Controller, a Data Management System, and COBOL.

Major features are automatic transaction roll-back, automatic record locking and unlocking, system-wide recovery and re-start abilities and complete database integrity regardless of any problem.

For Scientific Applications, the superb FORTRAN VII, designed to ANSI FORTRAN 77 standards, is globally optimising and offers comprehensive error analysis, a runtime library and a floating-point option.

The Power

Series Sixteen The new family of packaged 16-bit systems ideal for OEMs and system houses as well as end-users. Totally hardware and software integrated, these systems offer flexible configurations for business and industrial applications from entry-level to large memory systems — and at much lower cost than comparable products.

Prices from £7,700

GUEST PRIVATEVIEW

This Guest Privateview is by RODERICK REES, a systems support manager at ESAMS, where he heads a team working on

maintainability, reliability and safety for the air defence variant of the Tornado interceptor aircraft. Rees is especially interested in the

ways systems fail — even when they appear to be operating normally. This involves study of the man-machine interface.

New growth areas are too intellectual

OBSTACLES to "micro modernisation" of the UK have been cited by Michie's Privateview including the difficulty of tempting people from places where new technology has made them redundant to fresh places where other new technology has created job opportunities. The list of difficulties could be extended.

In many areas of the country, a surprising proportion of men live in their wives' home area — "she wanted to be near her mother".

Clydeside shipbuilders wouldn't allow a shipyard to be moved a few miles along the coast because they would not move house nor commute a few miles extra. And we all know about the "new town blues".

In other words, the preservation of a community feeling — sometimes, but not always, most strongly expressed in the early stages of a new town — is of high value. But if unions agree standard wage rates for all working areas, there is no economic draw into the community unless other economic factors happen to go the same way.

Programmers and engineers' pay rates are largely subject to supply and demand. Thus those who wish to work in relatively remote but pleasant areas, such as the West Country, may accept lower rates than must be paid to attract people into London.

Tinkering with the working week or educational release will not change that. Mostly such things will, in any case, affect only those who do not suffer from unemployment anyway (how many Port of London dockers will want educational day-release?).

The whole situation is complicated by unpredictable and arbitrary matters of taste and fashion. Who could expect, for example, that the "microprocessor revolution" could, at so early a stage, seriously attempt for £139 to compete for the £1 pocket phrase-book market?

More than that, many of the traditional skill areas, particularly in engineering, included manual, holistic ways of thinking and operating that were valued by the workers.

The new growth areas like programming are too intellectual. Not many machine tool craftsmen, for example, will wish to, or be able to, convert to

a purely intellectual skill. What is more, I believe they are right. A community that is so heavily intellect-based must expect some sort of social or psychological problems from neglect of the non-intellectual capacities and failure to integrate them.

In the long run, I believe a community which is heavily intellect-based must, for its own health, deliberately seek to create growth areas which are based on non-intellectual activities or, better still, on thoroughly integrated areas.

This will be difficult. The enormous increase in the number of craft potteries indicates the abstract pattern that is required, but they do not bring in enough money.

In the end, people look for meaning, and human meaning cannot be intellectually expressed.

I did once meet a computer engineer who, answering my challenge, claimed that he could write a program of instructions for how to make love to your wife — if so, then anyone should be able to use it. But I don't think he asked his wife's opinion!

A part of the problem over technological unemployment is

people's bolshie reaction to having to work automatically; that is: being forced to behave like intellectual abstractions.

"Job enrichment" is a hesitant scratch at the surface. Encouraging the creation of small firms will help: the human interactions seem usually to be rewarding in themselves, no matter how dull or even unpleasant the tasks. In this sense indeed, "small is beautiful".

Perhaps a start which would be socially acceptable — its economic success could be more than guessed at — is the encouragement of small firms, started and owned by local people including union members, encouraged by unions.

Meriden did it backwards. First you must identify people in, say, the shipbuilding community in Glasgow, who given a little, and only a little, help have enough go and enough of the community's trust, to make a company succeed.

It is hard to see much else that can succeed, except allowing outsiders to come in, so that we become the world's employees.

If the Americans are frightened of the Japanese and Japanese are frightened of the Koreans, what will happen to UK micro-electronics firms when the Koreans really get going?

So we must do it ourselves, and that means we must first devise "it" for us to do.

SOFTWARE FILE-1

US to restrict sales of Datasecure to 'safe' installations

A CRYPTOGRAPHIC security system developed for ADR's database management system Datasecure/DB is being regarded by US State Department officials as too sensitive for uncontrolled marketing outside the US.

The system, Datasecure, was developed by ADR in conjunction with a company specialising in data encryption technology, Computation Planning Inc (Complan). It is scheduled for release in the US this year.

It looks unlikely, however, that the software will be marketed in Europe, as the State Department is reported to regard it as an instrument of war. It is therefore insisting that each installation be explicitly authorised.

Only the implementation is being protected, the algorithm it employs, DEA, having been published four years ago by the National Bureau of Standards as part of its data encryption standard.

DEA has been adopted by such systems as the Federal network for the protection of interbank funds transfer, which has been endorsed by the National Security Agency for application to classified material.

It has also passed the vote of the ANSI standard committee X3 as the first American National Standard on cryptography.

ADR Datasecure divides the use of encryption as "near absolute" protection of information on removable media. It also argues that the intelligently applied, cryptographically sound, less costly than other methods.

As well as making use of read access "cryptographically" sound, files against tampering, change, even a single bit change, whole file to appear as random noise.

All other Datasecure/DB products are in this country by GPC (Software File, June 28).

Control of user access a feature of Oscar

CENTRALISED logging and recovery, control over user access, and a means to monitor system utilisation are the chief facilities provided by a new system software package for use on minicomputers supporting multiple VDUs.

Called Oscar, Online Security Control and Applications, the software was developed by GMS Computing, of Sheffield, and has so far been supplied to Infocore 7000 users.

It is written in Cobol and could be implemented in most minicomputer environments. The main aim of the system is to control terminal usage. This is achieved via a system of passwords, restricting named terminals and users to specific applications, transaction types and files.

In addition, the software provides a standard logging and recovery mechanism and facilities for recording and analysing transactions processed.

Oscar works by installing a program calls to the operating system, sitting between the application and the operating system.

As a result, it imposes a small overhead on most file handling operations, slightly degrading the response time. GMS argues that this penalty must be traded-off against increased security and points out that considerable tuning is possible.

given a suitable operating architecture.

A further consideration is significant savings in possible in the time recovery where the system crash, wastes day's transactions at the previous night.

Oscar is priced at £1,000, including installation and maintenance, but, depending on the number of terminals of the Cobol, more.

Components satisfying all three of these requirements now look likely to be available by the middle of next year, leaving just two further items on the original list outstanding.

The first of these is a compatible editor. Although the George 3 and VME/B editors are very

SOFTWARE FILE-2

Altergo language slashes TP development time

AN online programming language has been launched by Altergo Software which is claimed to slash the complexity of traditional TP application development and make possible substantial savings in development time.

Called CPG, Communications Program Generator, it also makes TP programs independent of their environment, so that the operating system, TP monitor, or file organisation can be changed without requiring changes in the application code.

Altergo is currently marketing versions which support either CICS or Shadow II, under both DOS and OS. It expects to announce an MTCS version shortly.

As a language, CPG is most closely related to RPG II, sharing some of its syntax and using a similar fixed format representation. It offers in addition a large number of extensions specifically designed for online programming.

These include, for example, an integral screen mapping facility and tools for screen manipulation and data editing.

A key aim of CPG is to simplify the programmer's task, eliminating the need for specialist knowledge and training. This is reflected in user programs by the absence of TP monitor linkages, IOCS macros, and record structures.

Instead, such items are held externally to the program in two libraries: the Central Routine

Library, which holds linkages and access macros, and the File Table Generator, which defines file structures.

Should there be changes in the system software environment, or in file organisation, only the library entities need to be modified and not the program code.

Programs compiled by CPG are re-entrant and multi-tasking and are said to be highly optimised and compact. As a result, claims Altergo, CPU and paging overheads are lower than with conventional languages and response times correspondingly improved.

Altergo obtained marketing rights to CPG from the West German software house Renker which

developed it and which will continue to carry ultimate technical responsibility.

Although the marketing agreement is worldwide, Renker has retained exclusive rights to the CICS version in West Germany, where it already has 80 users.

CPG costs £6,500 under DOS and £7,500 under OS.

● CPG addresses much the same user requirement as ICL Datasoft's Solve, currently under development for 2800s running under VME-B (CW, March 2, 1978). Solve, now renamed by the company as Slave and likely to be launched early next year, differs however from CPG in being interpretative and using an English-like syntax.

Univac version of Quikjob

WESTINGHOUSE is to market a Univac version of the highly-regarded report generator and general utility Quikjob, previously available only on IBM equipment. It will run under the VMOS or VS/B operating system on Univac Series 70 or Series 90 machines.

The new version was produced by System Support Software, the US developer of the original Quikjob package, and costs much the same as the IBM implementation. A permanent licence for Quikjob II costs £2,200 and, for Quikjob III, £3,750. An implementation of Quikjob, which includes Quikjob III as a subset, will also be available.

IBM-oriented system software is only rarely converted for use on other mainframes, though the much larger Mark IV system is also available on Univac systems in addition to IBM and Siemens. The Univac Series 90 has also attracted the attention of the NCC, which last month launched a version of Filetab for it (Software File, June 21).

Algol 68 is first SME step to bridging 1900-2900

THE introduction of the RS Algol 68 compiler — predicted to accompany the next release of VME/B — will constitute the first tangible step taken by ICL towards realising the concept of the simulated machine environment, SME, the new set of 1900-2900 transition aids announced exclusively last week (CW, July 18).

RS Algol 68 is based on the RSRE's Algol 68 compiler (Software File, May 31) and has been widely used by systems programmers on 1900 machines for many years.

The availability of the language on the 2900 series thus constitutes one of the vital software bridges between the two systems envisaged by SME.

It was in fact one of the original requirements identified by W. D. & H. O. Willis, along with the need for a 1900 implementation of the Cobol C2 compiler and the ability to run VME/B SCL under George 3.

Components satisfying all three of these requirements now look likely to be available by the middle of next year, leaving just two further items on the original list outstanding.

The first of these is a compatible editor. Although the George 3 and VME/B editors are very

powerful to handle the existing 1900 workload.

Few manufacturers have in recent years posed users such substantial conversion problems

on new range hardware, but SME — like its predecessor and converse DME — is seen as going a long way to removing the remaining obstacles.

similar, there are a number of irritating differences which users would like to see eliminated — such as the fact that starting point for the George editor is 0.0 while the VME/B editor labels the first character as 1.1.

ICL has not yet committed itself to bringing the two together but a spokesman thought that it would not be a major technical task and could well be within the scope of an experienced systems programmer at a user site.

The other remaining requirement is for a 1900 implementation of the data dictionary, which is seen as of potentially major assistance to forward planning.

The intention of SME as a whole is to allow real transition to 2900 to begin even before a 2900 has been installed. An important freedom it gives is the ability to tackle each conversion task independently, on a timescale fully under the control of the customer.

Without it, it is argued, conversion to 2900 is for some customers no more attractive than a move to any other hardware, especially when only a non-DME machine, such as a 2970 or above, would be sufficiently

End-user facilities for online info on Prime

A PACKAGE giving end-users all the basic facilities needed to maintain online information systems on Prime minicomputers has been developed by LMR Computer Services, of Maldenhead.

Called Admin, it is being used on LMR's Prime 400 to provide an online bureau service. It is also available under licence for use on in-house Prime machines and LMR is talking to two further minicomputer manufacturers about implementing it on their systems.

Admin provides facilities in three areas: file maintenance, data retrieval and reporting. Notable features of the system include support for multiple file independence, giving it some of the characteristics of a database management system.

The system is also notable for its efficient handling of text, by catering for variable length records in which each item may be of any length.

Users access Admin facilities via a set of simple commands issued via a VDU. New file entries, for example, may be set up using Create, subsequently being Displayed, Edited, or Deleted.

No file definition step is needed to set up a new file, as all the information required is taken from the screen input format. If new fields are added, the file will be redefined or extended automatically.

However, files are not tied to screen formats and any number of screen formats can be used to maintain a file.

For retrieval, the system offers a Find command which operates either on the prime index field or on one of up to 19 secondary indexes. A Search facility is also implemented, allowing a sub-file to be extracted following a sequential scan of the file.

The system also offers a utility for defining print formats and a data dictionary. All Admin facilities are protected by passwords, which operate at the system, file, or screen format level.

LMR sees Admin as more accessible to end-users than Prime's Power-Plus, pointing for example to the fact that no file definitions have to be prepared, and to the ability to process free text.

Admin is written in Fortran and requires a minimum working space of 64K. It is priced at £8,500.

The DP manager who wrote the lease on his 303X and then paid the price

He thought he was doing his company a favour. Take the 303X on a financial lease, write it off over the leasing period, and then remarket it himself at the residual value. Pretty smart.

Then IBM announce the 4300. Suddenly he's no longer sure what that residual value will be. It seems he's been paying through the nose for the last three years in no way, because in the end he's not going to make a killing after all. Except perhaps in a rather unintended way.

It's high time he called in IBL. We specialise in the leasing, broking and trading of IBM mainframes and peripherals worldwide, and we can help him in a number of ways. For example, by converting his financial lease into an operating lease we can substantially reduce his outgoings and relieve him of all worries about his equipment's eventual worth.

This is clearly no time for users to gamble on future values. Ring David Scouse on Ascot (09901) 22286. He'll take a load off your mind, and the financial director off your back.

THE INTERFACE TO THE FUTURE ADABAS SOFTWARE DB/DC SYSTEMS

SEMINAR:

ADABAS: 19th SEPTEMBER, LONDON

ADABAS — the Adaptable Data Base System, developed since 1977 and 1978. It is efficient, flexible and easy to use — with powerful supporting systems:

ADABAS Data Dictionary
ADAMINT — the ADABAS data manipulation facility.
ADASCRIP — the ADABAS on-line query language.
ADACOM — a comprehensive retrieval system.
ADABOMP — a bill of materials management system.

COM-PLATE — the unique t.p. monitor that encompasses interactive program development, transaction processing, message switching and operator end systems programming facilities in one reliable high performance package. Only one copy is required for interactive program development and production end development transaction processing.

NATURAL — an on-line end batch programming language for use with data base and non-data base files. NATURAL, powerful and flexible with relational capabilities, requires only 10% of the coding required by conventional programming languages with no loss of performance. With NATURAL a transaction can be written without any knowledge of the host t.p. monitor programming conventions.

ADABAS-M — the minicomputer version of ADABAS with its own Data Dictionary and query language — ADASCRIP-M (available 3rd quarter 1979).

Your future DB/DC needs can be met by Adabas Software, part of the worldwide Software AG group.

Engineering exhibition

SOUTHAMPTON has been chosen as the venue for the First International Conference and Exhibition on Engineering Software, to be held from September 4 to 6.

Major engineering application fields to be covered include civil and structural, mechanical, environmental, transportation, electrical and electronic, and water resource engineering. The concurrent exhibition will cover software products, services and equipment related to engineering software.

Further information is available from Dr. R. A. Adey, ENGSOFT, 126 High Street, Southampton, SO1 0AA. Tel: 0703 21387.

Puzzler

THE diagram on the left shows how 20 points, arranged in the shape of a cross, "generate" 21 four-point squares of various sizes. This week's problem is to remove six of the points, in such a way as to "kill" all 21 squares by taking away at least one of the corners in each case. See page 53 for solution.

Library for LMR

THE Chambridge library, developed by share Process Systems, is a design, test and analysis tool. It consists of a set of programs for process design, simulation, and analysis. The library is available for purchase or under licence.

OP SPOT

'This industry does not need trade unions'

OPERATIONS staff and union involvement is an issue on which John O'Reilly has strong feelings.

Chief operator at Astral Computer Services' London bureau, he first gave us a taste of his views some time ago (Op Spot, May 24).

On that occasion he said, in effect, that if an operator is dissatisfied with his site, there is no need to look to unions for help — he merely has to find another installation.

For those comments he received a sharp rebuke from a number of union officials who said that his advice amounted to advocating "job-hopping" (Op Spot, June 14).

Stung into action by that criticism, O'Reilly writes to Op Spot once again, pointing out that sites in the computer industry are crying out for staff.

The economics of the situation puts the employee in a very strong position.

"I am not for one minute suggesting that 'job-hopping' is the solution to every problem. However, the freedom to move about is something which very few industries have to offer, and staff should take advantage of it to better themselves."

In his view, the fact that staff move about is beneficial not only to the individual but also to the industry as a whole.

"We have the opportunity to better ourselves from an educational and financial standpoint, not only by taking but by contributing positively to the development of other sites by passing on the knowledge we have gained."

He argues that individuals should earn what they are

worth, and is critical of union bargaining.

"I am sure a lot of people would love all rises to be 7%, or whatever, across the board. It would probably be negotiated by a shop steward or two who could not distinguish between someone who was learning and contributing to the site, from another who was asleep all day."

He defends management by emphasising that he has always been well treated by them: "Since I have been in the DP industry, I have always worked for companies which interview staff regularly to ensure that they are content and are progressing along the right lines. Some of them negotiate pay rises on an individual basis — if that's not an incentive, what is?"

He concedes that unions are necessary and have their use, but is adamant that the com-

puter industry does not need them.

"Let me state categorically that I realise under certain circumstances trade unions do a lot of good. However, this industry has a very good record for peace and so let's keep it that way."

Auerbach report highlights need for software monitors

SYSTEMS are becoming more and more sophisticated with the emphasis shifting away from batch work and towards transaction-based applications. As a result of this, job accuracy, information and observation by the operator is no longer adequate for assessing system performance. Software monitors are necessary, according to a portfolio by Auerbach Publishers Inc.

Called Analysing the output of the software monitor, it is one of the July updates to the Centre Operations Management, and relates to the merits of software monitors.

How one site kept cost of listing paper down

THE price of listing paper has risen by 20% in Belgium, but one site at least has found a way of keeping costs down.

Staff at Oow Corning, silicon product manufacturers in Brussels, have added a pseudo-writer to their IBM 3031, which runs under the OS/VS1 operating system.

And operations manager Gerald Boggiano reckons that the pseudo-writer, or WRTZ as it is often called, will save the com-

pany some 500 listing pages per week.

He said: "We have a JEALIMS link to terminals in five European countries and each of them may start and stop their readers perhaps three times a day."

"Before we put the pseudo-writer in, the reader would produce a listing with a header and trailer label each time they were stopped."

By Bernard Allen

MICRO NEWS

At an ICS troubleshooting course, a student becomes familiar with an in-circuit emulator.

ICS teams with Poly for courses that give hands-on experience

AFTER five years of persistent "door-to-door" selling of its microprocessor training courses by mail shot, Integrated Computer Systems has gained a roof over its head by teaming up with the Polytechnic of Central London.

Professor Derek Wilson of PCL explained that the college had responded to the last government's initiative to provide continuous education in microprocessors, and had picked ICS as a partner because it was established in the short course business, was good at marketing and had shown good administrative ability.

He added that he thought any US firm would have to stay up to date with its material if it was to maintain its financial viability in the fast changing US market.

The courses will be one to five days long, and will start in September in the building in Holborn which was vacated by the School of Law when it found larger premises for itself.

A feature of the courses is that they provide hands-on experience of microprocessor devices, which, ICS president Dr David Collins explained, gives a practical understanding of what is involved and overcomes student fear.

On one of the general micro courses, each student uses his own Intel 8080-based processor board with a hex keyboard and two kilobytes of RAM, and also an interface board with a counter-timer, interrupt logic, analogue to digital conversion and several serial and parallel input-output ports.

On the troubleshooting course, four or five students

share test equipment which includes a logic analyser, an in-circuit emulator and logic and current probes.

The aim is to train engineers to use micro in designing products that will be competitive, and to close the "implementation gap" between high technology in research establishments and the shop floor.

David Else of the NCC said PCL and ICS were in at the beginning of a very large expansion in training for industrial students, with 11,000 more places expected in the UK as a whole in the next academic year. Training for maintenance and installation engineers was also important, he said.

The ICS scheme will add 1,000 places next year to the microprocessor applications and awareness course PCL is already running. The £80,000 of government funds will enable it to re-equip the Holborn building to set up the scheme, which is expected to become self-financing very quickly, turning over about £½ million a year. It will be a base for single-client courses, modified to suit a particular industry, like those ICS ran recently for the National Coal Board.

Seven courses are planned initially, including a manager-level overview of microprocessors, telecommunication applications, manufacturing and industrial control and military systems.

Micros are the bane of about a third of ICS courses, and others have been developed recently in fibre optics, radar, digital image processing and signal processing.

Touch-sensitive keyboard

A TOUCH-SENSITIVE keyboard made by Star Devices of Newbury, Berkshire, is an unusual method of generating the 128-character ASCII set: it has 128

keys, one for each code; upper and lower case and control characters are all separate; and there is no shift key.

The price is £37.50, and the range of options from £2 to £8 includes various serial interface arrangements as well as the earphone and socket.

Thermal printer for Trendcom

PERSONAL Computers, the London-based Apple distributor, has started importing the Trendcom 40 chips thermal printer from the US and has sold the first 100 units to Apple and Pet users.

Selling at £243, the Trendcom 100 printer uses a five by seven matrix and prints bidirectionally 40 characters to a four-inch line.

10 years old

CHIP maker Mostek, which first produced the Z80 for Zilog before Zilog was able to produce it itself, celebrated its tenth birthday last month.

Set up in June 1969 to produce MOS/LSI, it shipped its first product the following year and has since grown to turn over \$134 million last year. It has 5,800 employees worldwide, offices in seven European countries as well as in Japan, and a manufacturing plant in Malaysia.

'First home computer'

"THE world's first true home computer" is the claim Ohio Scientific has made for its CDP DF, launched at the Chicago Consumer Electronics Show.

The claim is based on the number of add-ons and interfaces provided for entertainment and external control by the \$2,800 system. They include a real time clock for use in monitoring and controlling home devices while the system is in use as a personal computer, an AC interface for remote control of appliances plugged into

NCC seeks data on micro software

A SURVEY of microprocessor software is to be carried out by the National Computing Centre, in response to the large number of inquiries the centre has been

receiving on this subject. There will be two parts, one covering high-level languages and the other applications packages, and the NCC is keen to receive information on these from both suppliers and users.

Questionnaires are being sent to 800 software suppliers to determine what products and support services they currently have available. Any supplier who has been overlooked, and any user wishing to contribute comments, should contact Lyndon Morgan at the NCC, Oxford Road, Manchester M1 7ED, telephone 061-228 6333.

The information being collected on programming languages includes their characteristics, the versions available, their suitability for different applications, and how they are being marketed. The support provided by suppliers for applications

packages will be looked into in particular depth. The results of the surveys will be published.

The NCC has just published a paperback book by its Chief Editor of Publications, G. L. Simons, entitled Introducing Microprocessors. This gives a brief description of the principles behind micros, and goes on to list the specifications of most of the chips now on the market, and the software available for them.

Another chapter discusses what designers need to consider when incorporating micros into their products, mainly from the hardware point of view. The last two chapters describe a range of applications for micros, and touch briefly on the "social impact" side. There is an extensive bibliography the book costs £8.50.

When a data bank is used to maximum advantage it can make a tremendous difference to a company's efficiency, and really lighten a workload. No system is quicker or more efficient than NCR's COM service (Computer Output Microfiche). Or more compact. 2 oz of microfiche contains the equivalent of 26 lbs of computer print-out stationery. Or more secure (the smallest safe becomes a strongroom).

Of course, other companies also

offer COM capability. But NCR are the only computer manufacturer to run a COM bureau. So we are in the COM business from A to Z, as makers, suppliers, consultants, and users. Not only that, we also make our own readers and printers.

If you want to make the most of your computer, fill in the coupon right now. We'd hate to think of you leading a dog's life just because you're not using our COM service.

It's like having a computer and not using NCR's COM service.

NCR Computers. Designed to grow with you.

More money, more quickly

OPERATORS at the Guardian Royal Exchange are to earn more money, more quickly, under a scheme to be introduced shortly by the company. Staff will reach the top salary level of their respective grades by five annual increments, as opposed to the 12 under the old scheme.

This is part of an agreement between the Guardian Royal Exchange and the Association of Scientific, Technical and Managerial Staffs, the union with bargaining rights for the operators.

Improved terms also include a shift allowance of £850 a year for staff at starting grade, with all others getting £1,000 per annum.

We want your opinions!

OPERATORS often complain that nobody listens to their views. Well, Op Spot is listening and Bernard Allen is like to hear your opinions on ideas on all matters relating to computer operations.

Your letters should be sent to Op Spot, Computer Weekly, Dorset House, Stamford Street, London, SE1. Telephone 01-261 8035.

HINT OF THE WEEK Deleting unwanted output

DELETING unwanted output in the Unibus OS 1100 environment is the subject of a hint from Alan Winter, an operator at BP Oil, Harnall Hempstead.

Winter points out that certain file deletion jobs produce listings which are seldom read by anyone. This wastes both the operators' time and the company's money.

To avoid this, OS 1100 operators should make use of the delete option of the @SYM statement — a statement often used ordinarily to route listings to remote users.

He explains, "By placing @SYM, D PRINT as the last statement in the job, unwanted output is deleted by the system."

"As it is the last card in the run-stream, the statement will be

ignored in the event of an error statement and a dump will not be produced by the system."

He also says that the @SYM statement can be used to delete output from jobs which are not on disk.

He writes, "The routine which processes the @SYM, D PRINT statement will delete the output from the job as it is processed by the system."

This statement can be used to delete output from jobs which are not on disk.

PEOPLE AND EVENTS

Top jobs at Nexos and Motorola

APPOINTED to lead a team of microprocessor specialists and to support an OEM sales team for Motorola UK, is Ian Powers, who has been promoted to the newly-created position of marketing manager of MPU products for the company.

Powers was previously senior MPU applications engineer for Motorola, and his previous ex-

perience includes work on telecommunications and the design of software and hardware systems, mainly with Plessey.

Nexos, the office systems subsidiary of the National Enterprise Board, has appointed Joe Wilkinson to the board of Nexos Office Systems as financial director. He was formerly financial director of Enrotherm International, where he will remain on the board for the time being.

Chris Steggle, who introduced and developed the Arbat banking system, has been promoted to the new position of senior marketing consultant for the company with overall responsibility for product marketing. He is one of the longest serving members of Arbat, having been with the company for nearly seven years.

Derek Beasley has been appointed head of personnel and administration of Data Logic. For the past year he has been senior industrial tutor in the business studies department at the Polytechnic of Central London, and prior to this was head of personnel for British Olivetti.

Kelb Brook has joined the PCA Data Processing Accessories as product manager for the new PCA-Minicare service. He was previously marketing services manager at Philips electrical equipment division and before that was general manager with Pyral.

Tim Lilley, Ken Harvey, David Lines and Rod Pugh have all been appointed by Atkins Online as sales executives, joining the Southern region force. Lilley was formerly departmental head with the Help the Aged charity. Harvey joins the company from an M.Sc. course in management science at Heriot Watt University. Lines was previously regional engineer for Europe, the Middle East and Africa with Elliott Turbomachinery, and Pugh was an internal auditor with the Department of Energy.

Ramesh Sethi, internal audit manager with Forward Trust, a subsidiary of the Midland Bank, has been elected chairman of the Institute of Management Services, Birmingham branch.

Victor Jeffs has been appointed DP manager of Cornhill Insurance, based at the group's Guildford head office. He was formerly employed by the Lowndes Lambert group.

Thomas

Powers

Fairchild appointment

A FORMER general manager of IIT semiconductors, Dr Gerald Thomas, has been appointed divisional vice-president for Europe with Fairchild's semiconductor products group. Thomas will be responsible for the company's semiconductor operations throughout Britain and Europe, based at Fairchild's European headquarters in Finchley.

He joined IIT as technical director when its semiconductor worldwide group was formed in 1965, and was then promoted to director of operations for the company. Thomas has also worked for Standard Telephones and Cables.

David Ensor, until recently a consultant for Nexos Office Systems, a subsidiary of the NEB, has joined Data Recall as marketing director. In this position he will be one of four executive directors of the board. Before joining Nexos, he was general manager with Wordplex Europe.

The White Monk

The town of Hastings, Ray Goode, is seen here on an unusual assignment — launching The White Monk, an umbrella processing, instant printing and automatic typesetting service. Pictured with the Crier are Tony White (left) and Michael Monk, partners in the business, which has allied mainframe facilities from production to final mailing. The bulk of The White Monk's work is expected to be word processing with an emphasis on automatic letter writing.

John Farmer has been appointed managing director of Magnetic Components. He has been with the company for the past six years and a director since 1974. He was appointed marketing director with additional responsibility for new product engineering in 1977.

Clifford Harley has been promoted to computer manager for the Leicester Building Society. He joined the society in 1963 in the investment department at the Oadby headquarters. He

succeeds Paul Rylatt, who has retired after 42 years with the Society.

ICL squash

BRITAIN is to meet Sweden this week in a three-day squash international, featuring the Wilkinson Sword British squad and sponsored by ICL.

The contest is the first international between the two countries and is an important forerunner to the world amateur team championships to be held in Australia in October.

This is the second time ICL has sponsored a major squash competition. The first was in 1978 when ICL's Australian subsidiary supported the successful British Under 25 touring team in Australia.

Manager in Midlands

Lee Walkinshaw has become branch manager for Compu People Midlands, part of the group. He was formerly European marketing manager with Univac where he was responsible for the launch of the BC17 small business system in Europe.

By Judith Morris

The NCC's education officer George Penney (left) becomes a full-time member of the IDPM's council, following the close of nominations last week. The present chairman Neville Tooley (centre) and secretary-general Ted Cluff (right) were re-nominated. The council will decide the allocation of portfolios at its first meeting.

Move to make Cluff's IDPM job full-time

A MOVE is to be made tonight, July 26, at the annual meeting of the Institute of Data Processing Management, to make the secretary-general's job full-time.

The meeting, which is being held at the Royal Horseguards Hotel, near Charing Cross Station, at 4.30 for 5.00, will be told that over the 30 hours per week spent by the present job holder, Ted Cluff, is insufficient and that the Institute income of £80,000 is large enough to afford a full-time appointment.

Nominations for the 15 positions on the Institute's council closed last week and the 13 candidates are elected unopposed. The council has the power to fill the other two vacancies by co-optation.

The NCC's education officer, George Penney, is now officially a member and the offices of chairman, secretary general and treasurer will be filled from the new council.

Nominations were: Ted Cluff, Neville Tooley, Jimmy Macintyre, Nigel Laurie, David Bole, Mike Davidson, Mike Eaton, Jack Gelly, Roy Hill, George Penney, Vic Thorogood, Fred Thomas and Ewan Robertson.

The last two nominees are new to the council and all members are elected for a three year term with one third of the members resubmitting themselves for election each year.

Bob Marshall has been appointed computer centre manager in charge of Compucon's service centre at Doncaster. He was previously centre manager at Edinburgh, where he is succeeded by Harold White, formerly head of operations for the Gateshead centre.

Dr Russell Bromley has become sales director UK at Gylling Elektronik-Produkt AB, Oskarshamn, Sweden. He has worked for ICL since 1968 in Kidsgrove and Manchester as a sub-contract manager.

Mike Jenkins, of Siliconix, has become product marketing manager for ICs, for the whole of Europe and the UK. He was formerly a marketing engineer with the company. David Owen has been appointed product marketing engineer for discrete devices for the UK and Scandinavia. He recently joined Siliconix from General Electric where he was responsible for European product marketing.

Michael Russell has been named as data processing manager for Unichem. He joined the company in 1977 as assistant data processing manager, and was a member of the team that introduced the ordering system, Prosper.

James Bowle has become computer product manager for the Exchange Telegraph company, Exel. He joined Exel as sales engineer from GEC Reliance Systems, where he was responsible for selling internal communication systems.

Richard Cox has joined Merlin Gerin (UK) as field sales engineer for the company's programmable controllers. He was formerly a sales and contracts engineer with GEC Measurements.

Now, take immediate delivery on the display station that delivers all these features:

Non-glare screen for increased operator comfort.

Enhanced screen refresh cycle that eliminates screen flicker.

Reverse video cursor for easier identification.

Line and column indicator on 25th line for easier, more accurate text entry.

Uses less power, for lower operating cost.

Optional upper-lower case display (available at no additional charge) for greater flexibility.

Non-glare keytops that are easier on the eyes.

A built-in screen for reduced operator fatigue.

AUG-compatible keyboard for IBM compatibility.

The Memorex 1377 Display Station. Over 30,000 now installed, backed by Memorex's worldwide reputation for quality, service and reliability.

Dr Kempf demonstrates where the recording equipment is fitted to the Candy Tyrrell Formula 1 racing car.

Monitoring car performance

"If the driver has time to look at instruments, he's playing about," says Dr Korf Kempf head of a project at the Tyrrell Racing Organisation to research into racing car and driver performance that includes a mathematical model of the driver as a black box information processing subsystem.

The team uses Motorola 6800 family microprocessor devices to collect, reduce and process data from transducers monitoring tyre front, body aerodynamics, suspension deflection and other aspects of chassis and power train behaviour.

Kempf is to talk about the use of the team's findings in racing

car development at the Design Engineering Conference at the National Exhibition Centre in Birmingham on October 22.

Meanwhile amateur motor rally navigator Malcolm Cann, a member of ICL's project team of Barle, is working out how to use a Nascom-1 with 9K bytes of RAM to do his rally performance. He wants the system to give him a continuous LED display of average speed, distance to go next checkpoint and other essential information to feed to his driver, his wife Rose, on their rallies with the Farnborough and District Motor Club.

Protect privacy with licences—IDPM survey

LICENSING of personal data applications rather than registration would be necessary for effective protection of privacy, in the view of the majority of respondents to the IDPM survey of reaction to the Data Protection Report.

Of nearly 400 replies, 53% disagreed with the report's espousal of registration, thinking that more rigorous and formal controls would be necessary.

The survey (CW, February 22) was compiled by the IDPM in collaboration with Computer Weekly, and was sent out to all of the Institute's 5,000 members and to over 100 non-members who asked to reply. The results are being published in book form, after submission to the Home Office.

Many of the respondents indicated in comments that registration, with its lack of supervision, would be "too weak" and "demonstrably useless", but others said, "Licensing would make the regulations a bigger problem than the invasion of

privacy", and "Licensing suggests even more persons checking information thus defeating the motion to protect privacy".

Those surveyed saw plenty of practical difficulties in implementing privacy laws. One of these would be in obtaining consent from data subjects for the processing of data, and another would be in ensuring that print-outs provided to subjects did in fact contain all the information on the file.

There was plenty of agreement with the notion that natural files also posed a threat to privacy, and a good many respondents thought these too should be regulated.

Several of these last, however, put themselves in an impossible position by affirming at the same time that there were too many manual systems to regulate.

Most of those replying were DP managers. Not surprisingly

they felt strongly that the should be more than one authority and 81% thought such a body as the IDPM would be closely involved with the Authority.

The estimate in the Data Protection Report that £26 a year would be an economic regulation fee was treated with scepticism. A figure at least £100, this would be necessary to cover costs, said many respondents.

Post Office computer centre strikers reject 18% offer

POST OFFICE staff on strike at the Leeds and Harmondsworth computer centres have unofficially rejected the latest management pay offer of about 18%.

The offer was for a 9% increase with 7% for productivity,

plus a further 2.25% in shift allowances.

The Society of Civil and Public Servants will vote on the offer next week, but the computer staff have voiced early opposition to it, as it is reported that they are wary of the Post Office offer. This is because the finer points of the deal such as shift payments, co-operation in clearing the telephone billing backlog, and promises of no victimisation still need to be resolved.

Clearing up the telephone billing backlog is a big job, as it now stands at over £20 million. The Post Office has manually sent out bills for £181 million of this, but the SCPS says that the corporation has only received just over £80 million as a result.

"It is certainly getting enough cash to finance its borrowing, for another 12 months at least," said an SCPS spokesman. "The problem is that even if full normal working is resumed tomorrow, the billing backlog will continue to grow for a month or two. It could reach £200 million before it begins to fall."

"The two important factors in the Post Office attaining a normal cash flow again will be co-operation from the unions involved in the dispute and the unknown quantity of computer system failure as a consequence of overloading."

Such an event occurred earlier this year when a software restriction on the ICL System 4 at Leeds caused problems.

An added complication is that the majority of telephone billing

in certain areas is still done using Leo 320s. The Post Office is trying to remove this by developing an ICL DME, so enabling it to use the 320 on an ICL 2900 mainframe. The Post Office has accused of "unreasonable monopolistic practices" National Utility Services, which aids businesses by reducing money-saving methods using telephone and telecommunications equipment. NUS because of the time some customers are being wait for more cost-effective equipment to be installed.

Bid to slow down Aussie technology

STRIKING telecommunication engineers in Australia raised the spectre of a industrial action next year, bid to slow the introduction of new technology.

Members of the Australian Telecommunications Employees' Association, fighting solely for pay, but this has resulted in a relatively minor problem.

Because of a large forecast of demand for the telephone lines there have reports of a shortage of modems, but there is an excess of 1,200 and 2,400 type lines.

Amdahl profits \$1.2m despite warnings

HAVING warned that its second quarter figures would be dire, Amdahl Corp provided some comfort for its investors by achieving a net profit of \$1.2 million, and by maintaining the dividend at 10 cents a share.

Last month, Amdahl warned that profits would be sharply down because of the strong tendency towards leasing rather than purchasing, and said that it might only break even in the second quarter (CW, June 21).

Less encouraging was that while shipments were ahead of those for the same period of 1978, they were below company forecasts. The sharp decline in sales was reflected in turnover down 23% at \$56.5 million. Outright sales show up immediately, whereas less income is spread over the term of this contract.

In the second quarter of 1978, Amdahl had net profits of \$11 million. For the first half of the year, profits were down 28% at \$14.8 million on turnover up 5% at \$144 million.

Other companies reporting second quarter figures include Honeywell, CDC and NCR, and

all were substantially above the comparable period in 1978. Honeywell's net profit was up 39% at \$81.3 million on turnover up 15% at \$890.7 million. It well reported that the computer side of the business showed a substantial increase and that the overall record level.

At Control Data, profits were up 53% at \$37.8 million on turnover up 16.8% at \$772 million. At NCR, profits were up 100% at \$17.8 million on turnover up 100% at \$171.8 million.

Heading for a...

INFOTEC in the US has announced that it expects to have a net loss of \$3 million in the second quarter of 1979. The financial year has been a difficult one for the company, with a 150 white collar employees in the UK. The company has been in a state of financial distress, with a 150 white collar employees in the UK. The company has been in a state of financial distress, with a 150 white collar employees in the UK.

'Prepare for the Information Society or face unemployment'

THE education system is facing a colossal challenge society must be enabled to cope with rapidly changing technology, or it will be torn apart by disaffected young people, in the view of Professor Tom Stonier of Bradford University, who spoke at a conference there on Education for the Future.

At the same time, Stonier pointed out, formal school education is becoming "increasingly irrelevant" through the "by-pass" effect. Parents increasingly worried about oppor-

unities for their children are buying their microcomputers and calculators like the "Little Professor," and as a result children are coming to school knowing more than their teachers, in subject areas such as computers specifically.

Stonier was reiterating his thesis that the education system must be mobilised to prepare people for a massive switch to an information society, in order to avoid large-scale unemployment (CW, June 21).

He envisages a world in which 90% of the people work with information rather than in making things, but there is a major problem, in his view, in that economists have no concepts to deal with the creation of wealth by knowledge. Most are still "neo-physiocrats," preoccupied by the importance of land and capital, he thought.

It is knowledge, Stonier said, that could enable the UK to produce large quantities of

HOOPER... "Human teachers are fundamentally more capable than computers."

single-cell protein from coastal fish farming and thus become a food exporter, or to produce oil from coal or electricity from the waves. This knowledge will be the basis of the Information Society, making previously unproductive resources productive.

Also speaking at the conference was Richard Hooper, formerly director of the now-defunct National Development Programme for Computer-Aided Learning, a quango actually signed into being by Margaret Thatcher (when she was Educa-

tion Secretary). Hooper wryly pointed out, CAL is still very weak and under-used, even in the US, Hooper said, and there were many reasons for this.

Principal among these, Hooper thought, were the lack of software and the lack of commitment on the part of schools to provide the time for teachers to construct more programs.

CAL is still inflexible in that constructing the learning trees is tricky — it involves "pre-specifying the educational act." Human teachers are fundamentally more capable than computers in that they can understand questions that they did not know were coming, he said.

Hooper did insist that the view of teaching by computer as "dehumanising" is unfair. "Why does one think books are dehumanising?" he asked, pointing out that at least computers provide some feedback.

Turning to education about computers, Hooper claimed that

Union's micro education plan

THE white-collar union ASTMS is hoping to raise the consciousness of both the general public and its members about the impact of new technology.

In September, a Press and poster campaign is to be launched on the effect of the microelectronics revolution on our lives. It may draw some inspiration from The Collapse of Work, a recent

book co-authored by Clive Jenkins and Barrie Sherman.

In December, ASTMS is to run a course on new technology at its Whitehall College. Aimed at senior office representatives, the programme covers the development of new technology and its impact on office jobs, particularly with regard to job security.

Many teachers working on this did not know what business they were in. Was it mathematics or the social impact of technology they were dealing with?

One point Hooper felt strongly about was that Computer Appreciation courses should not be in the mathematics department. There is too much anti-vocational and anti-relevance bias in formal education in the UK, he said.

There is, however, a distinct shift in educational funding now, away from the DES and towards the Manpower Services Commission's training budgets, partly to get away from this bias against practical training.

The conference heard several

teachers, describe their experience in using computers to teach other subjects. A project on local history in Suffolk had involved the encoding of sizeable chunks of mid-19th century census returns on an ICL 1903 at Ipswich Civic College. This enabled children to find the answers to large numbers of questions on occupations, place of origin, and so forth.

Beverly Labbett from the University of East Anglia was enthusiastic about the educational potential of the "bone-bones information" the computer can provide. This stimulates children to ask questions they would not otherwise have asked, and to formulate hypotheses.

Small maybe Beautiful

— but which system is relevant to your business?

IBM SMALL SYSTEMS

International Conference
4, 5 September 1979, London

Two IBM companies now compete for your business with ten products from which to choose

- Which company should you select?
- Which product is most suitable for your needs?
- Which products are supported?
- What are their growth paths?
- How much do they cost?
- How long must you wait for delivery?

This conference provides you with the answers. It does not compare IBM with other products, but it does sort out the many choices for each of the small IBM products and the best time to buy, the best price, the best service, the best support, the best training, the best documentation, the best people.

onTime

Build a better understanding with the users of microelectronics

MICROSYSTEMS'80

Wembley Conference Centre, January 30 to February 1, 1980

Microsystems is a conference and exhibition which alerts industrialists and businessmen to the nature of this Second Industrial Revolution, and bridges the gap between the microelectronics expert and the engineers, scientists, systems designers, educationalists and others who use his skill and products. It is an open door to better business for suppliers of both hardware and software — microprocessors, memories, interfaces, peripherals.

In its third year, it moves from a hotel show to the more spacious Wembley Conference Centre, with some 1,400m² of exhibition space.

TO TAKE PART IN MICROSYSTEMS '80, CONTACT LLOYD COLLINS OF "COMPUTER WEEKLY" ON 01-261 8743 OR 8022 OR WRITE TO HIM AT ROOM 13, DORSET HOUSE, STAMFORD STREET, LONDON, SE1 9LU.

is sponsored by Britain's most influential range of electronic and computer journals, including "Computer Weekly", "Systems International", "Data Processing", "Electron", "Microprocessors", "Wireless World", "Electrical Times" and "Electrical Review". Organisers on their behalf: Iliffe Promotions Ltd. All are members of IPC Business Press Ltd.

These little chippies can eat a lot of cash

(And some of them never do learn to fly properly.)

When it comes to programming a microprocessor, there are some very time-consuming and expensive ways to do it. Like using a low-level language development system to build and test programs on the microprocessor itself.

Now there's a better, faster, cheaper way. With the new CONTEXT high-level language development system from SDL, CONTEXT makes a PDP-11 minicomputer play the role of a microprocessor. So you can do your programming, linking, and testing in a friendly and familiar place. And when the system is working the way it is supposed to, then you transfer it to the microprocessor.

So CONTEXT gets your new product out of the nest and flying in record time. And puts it where it is making cash instead of eating it. Ask us, We'll send you full information on how CONTEXT can put your microprocessor on an inexpensive, high-energy, fast-growth diet.

Some unethical sales techniques

FURTHER to 'Trader's Sales Bit' (CW, July 5), headed, "The way to preserve integrity in selling activities." I have been selling systems and programming support on a time and materials and fixed price basis for a major software house for nearly one and a half years and am pleased that you printed "30 Commandments for Salesmen".

I trust that certain people in our industry take note and perhaps I can outline other methods of unprofessional and unethical selling that are sometimes used by a few of the so-called professional software houses and agencies.

On two separate occasions this year I established program-

ming requirements with prospective customers. Having established our company's manpower resources I profiled suitable, technically qualified staff. On both occasions the candidates profiled, who were currently working for me, had been duplicated by other companies. Clearly these companies had obtained the same requirements but did not have suitable candidates available, so profiled people without first discussing the matter with them. Perhaps "a spirit to catch a mackerel", but embarrassing to the client, the candidate and my company.

Another area for concern is the way in which some agencies and software houses delib-

ately "doctor" CVs to ensure that candidates are at least interviewed by the customer. Fortunately, in most cases the "grey area" is exposed during the interview. However, if the sales approach is professional and convincing enough, and the candidate is suitable, it should not be necessary to mislead the customer and bring the service industry into disrepute.

Could it be that financial reward for achieving sales targets is the reason for the dubious approaches outlined?

If this is so, perhaps we should all think again and consider both the short and long term implications of approaching sales in this manner, and also bear in mind my own philosophy: "Client satisfaction is my most important product."

MIKE DOHERTY

Hanwell, London

SCERT still marketed

I HAVE just finished reading the article, "Is your performance up to scratch?" (CW, May 31). I wish to call your attention to an inaccuracy that appears in the accompanying piece. "Users must know what to measure."

The article's author stated that SCERT (not SKIRT) "is no longer marketed." This in fact is false, as Performance Systems Incorporated (PSI) has con-

tinued actively to market the SCERT Performance Prediction System since acquiring it from Comen Inc in December 1977. PSI has many domestic SCERT clients as well as several clients in Europe.

H. FRED SILVER,

Vice President
PSI,
Rockville,
Maryland, US.

Updating tax tables properly

THE article by Cliff Dilloway, "Updating your payroll programs" (CW, June 21) calls for comment on two points.

In his second paragraph he refers to "the tax tables proper", which may give some of your readers the wrong impression. He was referring to the manual tax tables, as distinct from the recently issued Specification for PAYE Tax Table Routines. I wish to make clear that the latter has the same legal validity as the manual Tax Tables.

Later on in the article Cliff

Dilloway makes the point that the logic changes contained in the new Specification do not have to be achieved by any particular date. While that was true at the time he was writing, "Notes on PAYE for Computer Users - Series 6 Number 2" issued last month indicated that the changes should be effected from April 6, 1980 at the latest.

G. O. LAWTON
for Assistant Director
Organisation Division M3/2
Inland Revenue.

The micro mystery

RECENTLY I came across an article in Autocar, June 10, where once again the mysteries of the micro chip were explained to the readers:

"The silicon chip, or micro-processor, call it what you will, is said to be a threat to our working lives. Whole factories will be run by a box of them,

watched over by a lone white coated technician."

It's not difficult to imagine an advertisement in the future: "White coated technician required urgently to mind busy chip shop."

B. G. LOKOS
Leeds, Yorkshire.

DPMs: Worlds apart?

WE found your Computerview (CW, July 12) particularly relevant to our own first-time user market in which we have specialised for over seven years as a business, and over 10 as a set of individuals. During this time we have had many happy hours discussing system requirements with data processing managers but must confirm the impression

given in your article that often the data processing department is worlds apart from the needs of the users. Let us hope that the common sense generated in your article does become commonplace.

ANTHONY D. HODGE
Principal Consultant
Systems Consultancy,
Chelmsford, Essex.

Suppressing technology in the computer industry

STRONG pressures exist in our society towards suppressing high technology. This can partly be characterised as "fear of the unknown". These pressures have somewhat relaxed due to the TV programme "Now the chips are down", and the government's strong reaction to it.

The weakening of the above barrier makes it important to take a step closer, and look at an analogous pressure within computer technology itself.

Computer technology is 98% staffed by people with no knowledge of engineering (or physics). These "technology-free" people have a fear of computer hardware which correlates with the previously discussed general public's fear of computer technology.

Management in industry, and also the politicians, being technology-free and fearing the technocracy as a potentially competing power base, are motivated to "bureaucratise" computer technology - to turn it into a paper, programming, technology-free activity.

It is important to study this "lateral arabesque", where programming, i.e. the contemporary clerk's occupation, masquerades as high technology/microelectronics, wave of the future, Britain's last hope, etc.

technology titles: Computer science - contains no science. Software engineering - contains no engineering. Fault tolerant software - implies hardware content, but contains none. Also, fault tolerant programming is impossible anyway. More reliable systems can only be achieved through engineering.

This bureaucratisation of computer technology cuts us off from the major growth industries of the future, which include:

1. Airline collision avoidance.
2. Systems for sensing and improving traffic flow in the cities.
3. Most of the medical electronics industry.
4. Real time school, bus and train re-timetabling in response to emergencies and user demand.

Each of these industries will be larger than the total "informatics", Von Neumann, conventional programming based industry that we seem to propose to restrict Britain to.

Programmers with very little knowledge of physics and engineering control all the "Computer Science" faculties and departments in Britain. There is a very real risk that, with the help of government (diverted from its attempts to support high technology and microelectronics),

Algol 68 points made clearer

I AM writing to correct a small inaccuracy in your comprehensive report of the implementations at the West Universities Regional Computer Centre (CW, July 12). Both 2800 Algol 68 and 2801 Algol 68 are implementations based on the RS per Algol 68 compiler written, owned by RSRE, Macclesfield. The 2801 Algol 68 is the portable compiler which should not be used to do any of the production compilation, written by S. G. Bell, P. M. Woodward, is not owned by RSRE as Technical No 802. The RS compiler is entirely in Algol 68.

The project manager, Multics Algol 68 compiler, Rees, the project manager, the 2800 Algol 68 is listed 17 Algol 68 implementations, either released or the ones you mention, UKN was written by F. Malvern, not by Mander. You state, although Mander uses the compiler on the 2801, that it is not possible for Algol 68 for the M2801 Algol 68.

Finally, many of you may have been puzzled by the remark that "service from PL/I is better than being permissive, deliberately restrictive" which really needs to be said. Could it be, perhaps, that a short article subject to put the real context?

MARTYN
Systems manager,
South West Universities
Regional
Computer Centre,
Bath.

INTRODUCTION TO PASCAL

Top down to the main program

Part 5

THE object of this section is to define completely the data structures needed by the Time Checker program and to write the "main program" or in other words, the statements between the program's BEGIN-END pair.

The Statistics file

Following the top-down approach, let us consider what output is required. There is the error report, but that is liable to be messy (errors always are) and not an optimistic place to start. It is far better to look at the principal output, the Statistics file. This is to contain all the Flexitime data since the last analysis. The top-level definition of the file is very simple, namely:

VAR statistics = FILE OF flexidata;

Pascal files are sequential with all elements in the file being of the type specified. This does not mean that all the elements are identical because a RECORD type may have variants. However, such power is not needed for a simple file of groups of times. Now what is flexidata? Each employee clocks on or off four times a day and this information is needed to analyse daily patterns. Furthermore, the week number would be useful because there may also be seasonal patterns, such as people arriving later in winter. This leads to:

```
PROGRAM timechecker(input,output,statistics);
TYPE
  days = 0..23;
  days of the week = (mon,tue,wed,thurs,
    fri,sat,sun);
  time = PACKED RECORD
    DAY : days of the week;
    hour : hours;
    min : 0..59;
  END;
  onoff =
    (inmornng,outmornng,infternoon,outafternoon);
  onofftimes = ARRAY[onoff] OF time;
  flexidata = PACKED RECORD
    week : 1..52;
    times : onofftimes;
  END;
VAR
  statistics : FILE OF flexidata;
  clocking : flexidata;
BEGIN
  rewrite(statistics); (* open it for writing *)
  read(clocking,week);
  WHILE NOT eof(input) DO
    inputtimeforoneemployeeaforday;
  END
```

Figure 1. The Time Checker: Mark 1

```
TYPE flexidata =
  PACKED RECORD
    week : 1..52;
    times : onofftimes;
  END;
```

That, too was easy; the real crunch comes in defining on-off times.

Four times in a row

There are four instances during the day when an employee should pass the gate. Let's define these as

```
TYPE onoff =
  (inmornng, outmornng,
    infternoon, outafternoon);
```

We might regret this later if Blaise decides to go into shifts and an outmornng time is given as 08:00. However, such a move is believed to be unlikely and would not upset the program, only the aesthetic tastes of the programmers.

Onoff gives names to the four times in question. To group the times themselves together we can use the oldest of data structures, the array.

```
TYPE onofftimes =
  ARRAY [onoff] OF times
```

This definition states that onofftimes is a type which is basically an array of four elements each of which is a record of the type time. To put this in perspective, consider a variable

VAR clocking : flexidata;

The time this particular employee went off at the end of the day would be given by

```
clocking.times[outafternoon]
```

The actual hour he went off is obtained by selecting the hour component at the end, as in

```
clocking.times[outafternoon].hour
```

The whole group of times can be moved around by naming

```
clocking.times
```

or the group for the week would, of course, be called simply

```
clocking
```

The weekly input

Since we decided that the data will be processed weekly, it makes sense to start off the data with the week number. Following that will be lines consisting of the hour and minute when the employee passed the gate. Mentioning the day four times seems wasteful but does have advantages.

1. It provides room for checking the times for inconsistencies.

2. It does provide for shift work later (eg coming on on Tuesday night and going off on Wednesday morning).

In keeping with the top-down approach, we will not specify the precise form of the times yet and go straight on to writing the main program. It is all in Figure 1.

Getting it in

Two of the three statements in the program concern input/output; they will be explained now. Rewrite, and its counterpart read, are used to open files for writing and reading respectively. The standard files, input and output, are opened automatically and it is invalid to use read or rewrite on them.

Read is the general-purpose and, indeed, all-purpose input

By Dr Judy Bishop

In the fifth of her 10-part series, Introduction to Pascal, Dr Judy Bishop defines the data structures needed by the Time Checker program, and to write the main program.

A lecturer in computer science at Wiltshire and University in South Africa, Dr Bishop first became acquainted with Pascal when she was studying for her PhD at Southampton University.

statement. If the first word in parentheses has been defined as a file name, then reading is done from that file otherwise input is read. Pascal's reading is type-driven or, to use an older term, free-format. Read considers the type of the variable and expects a value of that type to be the next on the file. Thus

```
read(clocking,week);
```

expects an integer between 1 and 52. Some compilers do not give read the power to check subranges but in principle they should. As in the program itself, spaces and ends-of-line are ignored before a number. If Time Checker is being run on week 23, then 23 can appear anywhere on the first line.

"Numbers" with letters

The next item that will be read is an employee number. At this point the input marker is on the character after the 3 (which should be a space). It is now important to know what this employee number looks like. If it is purely digits then the appropriate

```
read(employee, number);
```

will skip the rest of the line and pick up an integer from line two. However, it is far more likely that Blaise Inc uses the word "number" much like Humpty Dumpty... "When I use a word it means what I want it to mean".

The fact is, that employees are known by an identification tag which consists of the initial of their surname followed by a genuine number. In Pascal, this is

```
TYPE identification = RECORD
```

```
  initial : char;
```

```
  number : 0..maxint;
```

```
END;
```

For example, D. E. Mullins might be employee M2610. Note the careful use of a subrange for the number component. Since it is obvious that this will never be a negative number, we might as well tell the compiler so and let it build in a check against this happening. Maxint stands for maximum integer and is a constant defined by most implementations.

```
WITH employee, number DO
```

```
  read(initial, number);
```

Reading a character picks up the very next one on the file. But wait! This is currently the space after 23. Therefore we must first position the input marker at the start of the next line. This is done by a readln (ie read line) statement so in fact, the reading of the week should be done by

```
readln(clocking,week);
```

NEXT WEEK:

Part 6: Reading times using the Pascal specialities, CASE and sets

A COMPUTER WEEKLY HANDBOOK BASIC FILE DESIGN

BY OWEN HANSON

This book provides a brief but authoritative review of the most frequently used file organisation techniques, and of related subjects such as data security and software aids.

The file designer is shown how to choose between the available techniques on the basis of known or forecast information rather than rule-of-thumb, and methods of ensuring that the correct choice has been made are given.

Now work carried out by the systems analysis division of the City University Business School, London, is based on previously published information to provide methods of guaranteeing the performance of sequential, direct and indexed file. Marked improvements can be achieved, particularly with direct files, which are worthy of wider use than at present.

Students of data processing, lecturers and practitioners should all find the book invaluable, particularly because it provides a great deal of information and many illustrations in a very compact format.

Although Electronic Funds Transfer Systems already shift more money by far than any other method in the US, other methods are still used for the bulk of cheque transfers and it seems likely that they will continue to be used. Various reasons are cited, among them controversy over privacy laws and the enormous cost of conversion.

However, use of EFTS is spreading fast, and some analysts believe that it could become the principal method of funds transfer within ten years.

In this article, MORRIS EDWARDS describes the various EFTS systems operating at present in the US, among them corporate EFTS, for money and message transfer between member institutions, Fed Wire, the network that carries Federal Reserve transfers, and retail EFTS which handle transactions between a bank and its customers.

WILL electronic funds transfer systems ever predominate? In the United States, at least, one might be tempted to answer "No," considering the substantial consumer resistance to electronic banking and retailing, and the controversy over banking laws, security safeguards and privacy matters.

Yet, in dollar amount at least, EFTS is already the dominant payment mechanism in North America. In the US, for instance, financial institutions use EFTS to transfer about 80% of all payments, amounting to some \$275 billion daily.

To put the situation in perspective, though, it's important to note that these transactions

average about \$2 million each, and that non-electronic funds transfers involving cheques still represent the highest volume of transactions.

Even though US banks handle an estimated 30 billion cheques annually, there is no longer any pressure to convert to EFTS to prevent the banking system from "drowning in a sea of paper."

This was the anticipated problem that triggered initial interest in EFTS in the mid-1960s. Since then, however, banks have developed efficient non-EFTS technology for cheque processing, and many bankers believe cheques will be the best way of handling consumer payments

for the foreseeable future.

Also, whereas EFTS was initially conceived as the ultimate in consumer convenience, concerns over privacy, security and such matters as "float" have raised questions as to whether EFTS networks are needed or can be afforded.

If financial institutions could eliminate cheques through EFTS, the processing cost of 30 cents per cheque could conceivably be cut by as much as 80%. However, EFTS would have to be used universally to obtain the anticipated savings, and the upfront investment would be staggering.

In view of the costs involved and consumer attitudes to date,

some industry analysts feel that a full-scale EFTS network will never arrive. Others argue with equal conviction that systems promise too many benefits for too many people for it to be halted.

One study by Arthur D. Little indicated that, within the next decade, EFTS could become the dominant payment mechanism in both transaction volume and dollar amount. Little reckons that EFTS transactions will represent 17% of all transactions by 1980 and 70% of all transactions by 1990.

While one roadblock after another has snarled development of full-scale EFTS networks for consumers, financial institu-

tions have profited from the availability of advanced communications networks for rapid and secure funds transfers among themselves (corporate EFTS). On the international scene, the principal networks for corporate EFTS are CHIPS and Swift.

CHIPS, an acronym for Clearing House Interbank Payment System, was established by the New York Clearing House Association in 1970 as a means of eliminating cheques as a payment medium for international interbank transfers.

Currently, the network is handling interbank money transfers of \$100 billion a day at the request of US and foreign banks, involving an average of 45,000 transactions. To handle this traffic volume, CHIPS employs 350 terminals, computers, located in varying numbers in the 80 participating banks, all of which must be physically located in New York City to qualify.

Leased telephone lines link the terminal computers to a Burroughs B6700 triple processor system in the Clearing House computer centre. As the transactions and messages are processed, the central computer updates pertinent records in its disc and memory files and produces balance position reports and item-by-item detail reports at the end of the day.

Unlike CHIPS, which functions as an automated clearing house for interbank money transfers, SWIFT is not a funds transfer or interbank settlement system. Rather, it is a message system established as a computerised link between European and North American banks. It is remarkable in that it represents agreement among European and North American bankers to standardise communications interfaces and formats to handle a wide variety of international transactions.

Fully operational since 1977, SWIFT now links over 570 banks with about 1,000 branches in 17 European countries, the US and Canada, and handles over 114,000 messages daily. According to Peter N. Drummond of the SWIFT organisation in New York, Japan will be joining the network "in the next year or so," and he says that many other countries have expressed interest in doing so too.

Each country utilises a Burroughs computer configured as a concentrator, which receives input from domestic banks on a variety of private and dial-up lines. Most concentrators connect to one of two switching centres. In Amsterdam and Brussels, over leased lines operating at 9,600 bps.

For smaller, neighbouring countries with limited traffic, the concentrators are typically connected in series and share a link to the switching centre. Reportedly, a third switching centre will soon be added to the network in Culpepper, Virginia.

Culpepper is also the location of the switching centre for Fed Wire, the name for the Federal Reserve transfers. Fed Wire uses a star-type network to link all 12 Federal Reserve Bank head offices to the Culpepper switching centre. Each head office is also the centre of star-type sub-networks which connect 25 Fed branches and more than 200 member banks into Fed Wire.

According to Howard Crump,

adviser to the Federal Reserve Bank of New York, the long-range goal with Fed Wire is to replace the centralised star-type configuration with a distributed, packet-switched network. At present, the Culpepper centre switches 58,000 transactions daily, transferring an average \$150 billion in Federal Reserve funds and government securities between member accounts at the Federal Reserve.

Since September, Fed Wire has also linked all 32 American Clearing Houses into a worldwide electronic payment network. Through the network, consumers and corporations

By Morris Edwards

now make use of ACH services such as direct deposit for pay and automatic bill payments anywhere in the contiguous states.

ACHs are institutions engaged in the clearing houses for the interchange of cheques, except that cheques, except on magnetic tape rather than on paper, are carried on magnetic tape through ACHs. Payments, such as salary payments or wage payments, which result in a deposit into an individual's account, and debt payments, such as transfer funds from one person's account to that of another, for example, an insurance mortgage payment.

One controversy surrounding ACHs is the role of the Federal Reserve, which operates the New York ACH. On the other hand, the Privacy Protection Study Commission recommended that no government agency play any part in the system because of the threat to personal privacy.

On the other hand, proponents of Federal Reserve operation of ACHs argue that it is simply an extension of the traditional role of clearing houses and that no processing and that no institution would be responsible for the system. It was pointed out that the National Commission on Electronic Funds Transfer recommended that the Federal Reserve not be involved in the system.

Despite the US privacy law, which has taken the industry by surprise, the industry is developing a network of work for interbank transfers without government involvement or the Federal Reserve.

Bank Wire, for instance, was established in 1952 by 13 Chicago and New York banks to transmit funds transfer and administrative messages to more than 250 participating members. Last year, Bank Wire II took over the funds transfer activity among the 185 member banks, providing them with improved reliability, accountability and flexibility.

Developed over three years at a cost of nearly \$10 million, Bank Wire II operates 30 times faster than its predecessor system. It is currently processing more than 18,000 messages daily, involving funds transfers in excess of \$20 billion, though it can accommodate more than three times this payment message volume.

While the communications facilities are in place to handle corporate EFTS, no such integrated nationwide network exists for retail EFTS. Conceivably, one could be built on Fed Wire or Bank Wire, but a single network raises Big Brother issues as well as fears that the nation's 14,300 banks and 7,000 thrift institutions might be consolidated into as few as 100 national organisations.

Some observers feel that EFTS cannot bloom fully until the independent datacomm systems established by retailers, banks and thrifts, the Fed and corporate America are somehow tied together. Others argue that EFTS is best handled by a multitude of computer networks.

Whatever the relative merits of the two approaches, retail EFTS has historically developed on a local, or at most a state-wide level, and with only a few of the possible EFTS options. Few financial institutions

'Identifiable and long-lasting trends are developing that will affect both financial institutions and the industries that service them...'

could afford the investment that Citicorp has ploughed into its electronic banking operation, known as Citicard Banking Centres, or CBCs. Over the last ten years, it has spent about \$100 million in developing the electronic system.

Most of the CBCs are located in Citicorp branches, though a few of them are in stand-alone kiosks. Most contain two Customer Activated Terminals, or CATs, which customers may use to deposit and withdraw cash, transfer funds between checking and savings accounts, make payments on Citicorp mortgage and bank card accounts, and find out their account balances. Getting into the bank after regular hours involves inserting a plastic Citicard into an electronic door-opening device. The same card activates the automatic teller machine when used with a personal identification code.

Citicorp uses an electro-optical reading technology imbedded in its card, which the bank feels is substantially better than a magnetic stripe since it cannot be copied as easily and is harder to scratch or damage. A wholly-owned subsidiary, Transaction Technology in Los Angeles, developed the CAT, which is more efficient and sophisticated than a conventional automatic teller machine, providing simple, step-by-step instructions to lead the customer through the various transactions.

"Contrary to some predictions, the machines don't intimidate people one bit," says Richard Kovacevich, senior vice-president. "More than 86% of customers who have used them once use them again." The CBCs are handling transactions at the rate of almost two per second every day and that about 40% of all CBC usage is during normal working hours, indicating that customers are using them to avoid queues at teller counters and to save time.

'Expectations are clouded by lukewarm attitudes'

Also in New York, Chase Manhattan is pioneering another EFTS arena — Giro-type processing of authorised payments to organisations such as retailers and life insurance companies via ACH debits. Chase vice-president George White, a well-known advocate of electronic Giro systems, explains that the concept requires the payer to initiate the funds transfer by ordering a payment to be made from his account. As such, it is the exact opposite of the cheque mechanism, where the actual transfer of funds is triggered by the person who receives the cheque when he cashes or deposits it.

European Giro systems are often handled by the country's PTT. White points out, with financial accounts maintained at the postal services and payment instruments moved physically. In the United States, however, Giro systems would typically use an electronic payment infrastructure such as ACHs.

Another approach to limiting paper flow is cheque truncation, where cheques are microfilmed

bank card networks that will serve to transmit information and to support debit card use.

- Formation of an organisations structure to monitor the direction of point-of-sale banking devices by banks and third-party entities.

- Spread of automated banking equipment throughout the financial community at a rapid pace.

- Increase in holding company acquisitions promoted by the smaller bank's disadvantage in keeping pace in an automated

environment.

- Increase in bank services to retailers in the area of inventory control, bookkeeping, re-ordering and the like from data collected from the EFTS equipment.

- Increase in the direct deposit of payroll as the trend filters into the business community.

- Increase in preauthorised charges and credits as postage costs continue to spiral.

- Development of industry-to-industry automatic payment systems such as those in the transportation and utility fields.

Towards the cheque-less society?

Handling the conversion from a 1900 computer is a job for experts.

ANYONE converting their systems from a 1900 installation to an IBM 370, 4300 or 3000 machine, will benefit from the unique service offered by Tesco Management Services. As conversion specialists we provide the most comprehensive service in the UK. We are able to advise you at every stage of your conversion. From initial planning right through to implementation on your new machine. We will provide, where required, personnel to manage and carry out the conversion.

Time and cost savings

Because we have developed a proven set of procedures for each step, we are able to eliminate the snags and delays which can so easily occur in the process of conversion and we are therefore usually able to make considerable savings for our clients both in time and costs.

In addition, we provide software aids for file and program conversion. We can undertake to convert your programs through to clean compile or onto unit test at a fixed price. Tape conversions are also included in our services.

So if you are considering converting from a 1900 to an IBM mainframe, talk to us as soon as you can. The earlier we are involved, the more we can help you. Call Ian Bell, Executive Director, Tesco Management Services, on Waltham Cross 32222. Our conversion service is completely confidential.

Permanent Career Opportunities for Operators

ITEL AS/E SUSSEX
Our client is looking for a Technical Support Group Co-ordinator to assist in the smooth day-to-day running of their large communications network in Sussex. The successful applicant's duties will include extensive liaison with users, teleprocessing equipment suppliers and the Post Office. If you are of a Snr. Op./VS /Ldr. standard and have teleprocessing experience, this job could be yours.
SALARY: £4,500 neg. a.e. Call Elaine or Sally.

ICL 2960, 2 x ICL 4/72 SUSSEX
A well-known company situated in this picturesque part of Sussex are currently looking for an Operator to work a 32 1/2 hour week in 3 shifts. If you have 18 mths. - 2 yrs. ICL 2900 or ICL System 4 experience you could be ideal. There is also an opportunity to get into programming. Parks including 4 weeks' holidays rising to 5 weeks, subsidised canteen and pension scheme.
SALARY: £4,400 (under review) Call Sally or Elaine.

IBM 370/136 MIDDLESEX
Our client has an immediate vacancy for a Shift Leader to work a 3 shift system Monday-Friday. If you have 12 mths. DOS/VS/GRASP experience including some supervisory, and also have Maths and English 'O' levels (although 'A' level would be even better) this could be the job for you. Benefits include 4 weeks' holidays, £5 a week L.V.e. Spots and Social Club and pension scheme, etc.
SALARY: £5,400 incl. S/A. Call Elaine or Sally.

2 x ICL 2906 OOVER, KENT
Our client, Townsend Car Ferries, is URGENTLY seeking a Chief Operator to work DAYS ONLY. The ideal candidate would have 4-5 years' experience, preferably in a 2904 installation, although 1900 experience will be considered. There are also vacancies for Operators with 2 years' similar experience. If you want to benefit from such perks as special concessionary travel, pension scheme, subsidised canteen etc., one of these jobs could be for you.
SALARY: Chief Op. c£5,000 neg. Ops. c£4,500 neg. Call Sally or Elaine.

IBM 370/148 NORTH LONDON
Our client is seeking to fill two operational vacancies — 1 Operator and 1 Senior Operator post. For the junior position a minimum of 1 year's OS/VS 1 is required and for the senior position, a minimum of 3 years' OS/VS 1 and a good working knowledge of OS/JCL is essential. The ideal candidates will be working a 3 shift system and would benefit from 4 weeks' holidays, non-contributory pension scheme and a very good staff restaurant.
SALARY: Op. £4,1K-£4,8K incl. Snr. Op. to £5.6K. Call Elaine or Sally.

IBM 370/126 (soon IBM 4341) HERTS.
This company are looking for an Operator (who will need own transport) with a minimum of 1 yr.-18 mths. DOS/VS experience to work 2 shifts (them also exists a night shift 3 nights a week, once every 3 months). Benefits include 4 weeks' holiday, social club, contributory p.f.e. and discounts on products.
SALARY: to £4,500. Call Sally or Elaine.

Phone anytime, or for an application form leave your name and address with our answering service.

MYRIAD

PROGRAMMERS

PROGRESS TO ANALYSIS

N.W. LONDON

£5,000-£7,000

An excellent opportunity has arisen for programmers wishing to progress their careers within the systems development division of a major international organisation. Our client is looking for persons with good commercial experience (preferably gained at an IBM installation) who possess the personality and initiative to become effective systems analysts. Formal training will be given to the successful applicants who will join system teams to develop and subsequently implement a variety of applications, some of which form part of complex, multinational projects. Additionally, the systems analysts will be responsible for pro-

ducing business proposals, preparing cost and benefits appraisals, estimating project requirements and maintaining installation standards. The more senior persons will lead a team of analysts, reporting on progress whilst controlling the quality of work produced.

The company, based in modern offices on the outskirts of London, offers impressive starting salaries and very attractive career prospects. Employee benefits include generous relocation expenses, pension/life assurance scheme and a staff restaurant.

Ref. S1/2607

MYRIAD APPOINTMENTS LIMITED

30 Fleet Street London EC4Y 1AA

01-353 0981 24 HRS.

DO YOU WANT TO WORK IN ESSEX/EAST LONDON? -370/148

Why not come and see us between 6.00 and 8.30 pm Monday 30th July for refreshments and a chat with our DP team. Our office, Arodene House, is at exit 6 Gants Hill Station (Central Line).

We have a private car park in Frinton Mews (just behind our building).

More specifically, we have the following vacancies:

Systems Programmer.....up to £7500

Analyst/Programmers.....up to £7250

Systems Analyst.....up to £7000

Programmers.....up to £6750

Data & Standards Controller.....up to £6250

- ★ Flexible Working Hours (35 hour week)
- ★ Paid overtime
- ★ Luncheon Vouchers
- ★ Company assisted Savings Plans (after qualifying period)
- ★ Non-contributory pension and life assurance
- ★ BUPA

Save & Prosper is the largest unit trust and equity-linked life assurance group in the UK. We also offer a wide range of other financial

products including annuities, pension schemes, school fees and life assurance policies. As a group we manage investments of £1 billion for 34 million customers.

The administration of this complex environment revolves around an IBM370/148 operating under DOS/VS, POWER/VS and CICS/VS using remote and local 3270 VDU's, 3340 disk drives and 3420 tape units.

In addition, we have 28 software packages installed plus in-house written software which probably provides one of the most sophisticated DOS/VS environments in the country.

We need ambitious people to help with our comprehensive development programme, which over the next 5 years includes major on-line applications for our unit trust and insurance departments. During 1979 we plan to implement interactive programming facilities and have just implemented a comprehensive training package using audio-visual equipment. We believe in team work, and have committed ourselves to multi-disciplinary project teams.

We have a number of career opportunities in both our Development and Productive Systems environments and are looking for the following people.

SYSTEMS PROGRAMMERS

Applicants should either have a minimum of 2 years Systems Programming experience in a DOS/VS environment and have successfully completed at least one DOS/VS system generation or a minimum of two years CICS experience including some knowledge of CICS generation.

ANALYST/PROGRAMMERS

A minimum of three years programming experience in either COBOL or ASSEMBLER is required plus some experience in analysis. TP experience would be an advantage.

SYSTEMS ANALYST

The important quality required here is a sound proven systems background in the insurance industry, with the ability to convert user requirements into workable systems.

SENIOR PROGRAMMER

Applicants should have at least four years experience in COBOL and ASSEMBLER plus at least one year CICS experience.

PROGRAMMER

A minimum of two years' experience in either COBOL or ASSEMBLER.

DATA AND STANDARDS CONTROLLER

This will be a new position to control our Technical Library and Data Management functions. Applicants should have some knowledge of Data Dictionaries, Standards and preferably DBMS.

If you are prepared to work hard for a friendly but ambitious company and would like to know more about the opportunities we can offer, come along on Monday 30th July or telephone 01-554 8899 and have a chat with John Parodi, Mick Chivers, Tony Ward or Dea Cunnane.

Or write to Matthew Dickinson, Save & Prosper Group Limited, Arodene House, Perth Road, Gants Hill, Ilford, Essex.

SAVE & PROSPER GROUP

SCIENTIFIC APPLICATIONS EXPERIENCE

LONDON

As a new company within an established software house group our client offers an exciting challenge for computing staff with experience in scientific and technological applications areas. Much of our client's work is in defence and they are particularly interested in applicants with experience in the following areas:

**SIGNAL PROCESSING, NAVAL AND MILITARY SYSTEMS
LAND WARFARE, REAL-TIME DATA ACQUISITION, O.R.,
UNDERWATER TECHNOLOGY, MICRO-BASED DESIGN.**

Positions are London based and carry benefits which include at least 20 days' holiday, group health insurance and regular salary and promotion reviews.

These are outstanding ground-floor opportunities with a company with ambitious growth plans.

Systems Analysts/Project Leaders

FINANCIAL TERMINALS AND MINI-COMPUTER SYSTEMS

Datasab Limited - the fast expanding Swedish mini-manufacturer - have three important vacancies for systems analysts/project leaders in its Harrow and Stockport offices.

Financial Terminal Systems

If you have experience of financial terminals and data communications, ideally with cash receipting systems in the local authority market place, then you could start an exciting career with our financial terminal support group in either Harrow or Stockport. The equipment is of the latest technology recently introduced to the UK and our local authority customer base is expanding.

With all these positions Datasab offers you responsibility, the scope for working mainly unsupervised and the opportunity of being totally involved with customer projects.

Salary is according to experience, and other benefits include car allowance, pension, life assurance, LV's etc.

Don't miss these opportunities to join a young and progressive international organisation which is embarking upon the most exciting phase of its life to date.

For vacancies in Harrow ring or write to:
Derek Stollard, Southern Region Manager,
Datasab Limited, Northgate, 72 Northolt
Road, Harrow, Middx. Tel: 01-422 3442.

For the vacancy in Stockport ring or write to:
Paul Newton, FTS Systems Manager,
Datasab Limited, St. Christopher House,
Wellington Road Smith, Stockport,
Cheshire. Tel: 061-477 5140.

UNIST

University of Wales

**CIVIL ENGINEERING
AND BUILDING
TECHNOLOGY**

**RESEARCH
ASSISTANT
(COMPUTER
PROGRAMMER)**

Duties will include programming on a range of research and teaching projects. Prior experience in civil engineering NOT required. A part-time appointment could be considered.

Salary range: £3775 to £5488 (011079 scale).

Requests (quoting Ref. G) for details and application forms to: Personnel Section (Academic), UNIST, Cardiff, CF1 3NU.

Closing date: August 24, 1979.

UNIVERSITY OF SOUTHAMPTON

**MEDICAL RECORDS
PROGRAMMER**

Applications are invited for a

PROGRAMMER

to work in a small team for a medical records system. The successful candidate will be working with a robust and well documented system in the role of programmer, operations control and user liaison. The system serves a major research project for the department of Forensic Medical Care at the University of Southampton, and is on a LTL Module 1 linked to the University ILI 2870. Several microprocessor projects are also being considered.

Initially the candidate will gain experience of the system, assuming responsibility for appropriate times for outstanding and running the system and helping users.

Candidates must have a good working knowledge of COBOL, and should be willing to learn to be flexible and to take responsibility. Experience of assembly language will be helpful.

Salary 13775-14355 per annum dependent upon age and experience. Six weeks holiday per annum.

Letters of application giving details of qualifications and experience together with the name and address of two referees should be sent to Mrs. P. Vaughan-Smith, The University, Southampton SO8 9NH, as soon as possible. Please quote ref: 1069/A/CW.

Research Associate (Computing) required by social science research group to assist the Research Fellow (Computing) with administration of survey, production of SPSS data files, computer-produced documentation and information retrieval induction course for beginners, and general work on data management. Graduate required, preferably with either work experience or a second degree in computing. Appointment to commence October 1st, 1979 for a term of 3 years on scale Research 1A between £4,335 and £4,910 p.a. with annual increments.

Those with full details of educational qualifications, work experience and details of the names of two referees to the Director, Centre for Educational Sociology, 7, Buccleuch Place, Edinburgh EH8 9JN.

Closing date: July 17th, 1979.

Please quote Reference 5042.

Analyst

Marketing Management Information

Sandvik Coromant, market leaders in carbide cutting tools, require a senior Marketing Assistant to work in the established Marketing Services Department at Halesowen.

The successful candidate will be expected to make an early contribution to the analytical work of the department and to developing management information. Experience of ERP management information systems would be particularly relevant.

Applicants, male or female, should be aged over 25 and have a degree or equivalent in a numerate discipline. Industrial experience in an analytical marketing function is desirable, but an appropriate systems analysis background could be equally acceptable.

Competitive starting salary and a full range of large company benefits.

For an application form please write or telephone with brief details to: Personnel Officer, Sandvik U.K. Limited, Manor Way, Halesowen, West Midlands, B61 9JZ. Telephone: 021-850 4700.

**SANDVIK
Coromant**

IRISH RECRUITMENT FEATURE

Advertisers are reminded that the next Computer Weekly area feature will be published on August 9 and will highlight career opportunities in Ireland.

Space reservations should be made as soon as possible to:

Eddie Farrell — London — 01-261 8097

Copy Deadline: PM Friday before

COMPUTER WEEKLY
THE INDUSTRY'S WIDEST READ AND MOST REQUESTED NEWSPAPER

CLASSIFIED COPY

All classified copy should reach our offices no later than 5.30 p.m. on the Monday preceding Thursday's publication. If complete artwork is supplied 12 noon on a Tuesday. Ring David Abbey for further details on 01-261 8010.

Software and Electronics

DESIGNERS

live up to your expectations with

SYSTEM X

PROJECT

A £ multi-million investment to meet British and overseas telecommunications needs through the 1980s and into the next century. Revolutionary in concept, it will transform public attitudes to communications. Of vital interest to software and electronics designers.

PROSPECTS

It would be hard to think of a more significant project — or one which might add as much to your technical development and career potential. System X is a huge British undertaking with substantial export possibilities for years to come.

LIVING

Apart from reasonably priced housing, the Liverpool area offers many unique attractions. In addition, the motorway network brings the North Wales coast and Snowdonia, as well as the Lake District, within easy reach.

CHALLENGE

In a modern purpose-built environment in Liverpool, the team is involved in a very wide range of state-of-the-art electronic technology — logic design, microprocessors, automated production and testing etc. The system is highly versatile in order to accommodate new technology as it develops.

REWARDS

Design engineers and software specialists with the experience, qualifications and ability to drive the project forward will start in a salary range up to £9,500 p.a. There is ample scope for promotion. Generous relocation expenses will be paid where appropriate.

ACTION

Take a look at our 'Information Package'. Ring Bob Wooding between 9am and 5.30 pm on Liverpool (051) 228 4830. He will send you the package and may put you in direct touch with our hardware and software team leaders. Alternatively, post the coupon to Ray Beeston.

To: Ray Beeston, Plessey Telecommunications Limited, Edge Lane, Liverpool.
Please send me the System X Information Package.

MYRIAD

SENIOR ANALYST

TO LEAD DATABASE
DEVELOPMENT FOR
IBM4300 HARDWARE

MIDDX. (HAYES)

£7500

Our client is a leading manufacturer and supplier of bulk plastic products for the building industry and is expanding at an impressive rate.

Their current kit comprises an IBM 370/125 soon to be upgraded to a 4331, with a 4341 on order for 1981.

The Senior Analyst will be required to build and lead a database development group comprising a skilled team of analysts and programmers. The person appointed should therefore be able to offer a sound analysis background, preferably gained in a manufacturing environment and, ideally, some experience of an IBM database management system. A programming background would also be advantageous.

This is an ideal opportunity for a person seeking career progression in a dynamic environment and further advancement to Project Manager status can be expected in the near future.

01-353 0981 (24 HOURS)

SOUTH WEST UNIVERSITIES
REGIONAL COMPUTER CENTRE
UNIVERSITY OF BATH

ALGOL 68
COMPILER DEVELOPMENT

Vacancies exist for two systems software programmers to join a small team developing Algol 68 compilers. The team has responsibility for future development of the ICL 2900 Algol 68 compiler, which has just been released and is already in use at a number of sites in the UK and abroad. Other members of the team are currently designing a compatible compiler for Honeywell Multics systems. An additional person is sought for each of these projects.

The posts provide an exciting opportunity to gain detailed experience of compiler development, and to design and write software which will be used throughout the world. Both ICL VME/2 and Honeywell Multics are used interactively for development.

Algol 68 and compiler experience would be an advantage, as would knowledge of either machine's instruction set. However, the ability to learn quickly and work in a professional way is equally important, and recent graduates or postgraduates are encouraged to apply.

The posts will be for a period of two years, and salaries will be in the range £3775-£7521 (from October) plus a cost of living supplement vat to be agreed.

Further details and application forms, to be returned by 23.8.79, from the Personnel Officer, University of Bath, Claverton Down, Bath BA2 7AY, quoting ref. (79/175CW).

TYNE AND WEAR COUNTY COUNCIL
COUNTY TREASURER'S DEPARTMENT

COMPUTER PROGRAMMERS

Salary up to £5,073 (Pay award pending)

Applications are invited from experienced personnel or from persons wishing to enter the programming field for the first time.

The successful applicants will join a highly skilled and experienced development team working on a wide variety of financial, administrative and technical computer systems.

The County Council operates an ICL 1804S computer with 256K core store, 11 EOS60, magnetic tapes and drums, which supports a communications network over 50 terminals, used for on-line processing, data capture and MOP development.

Written applications, stating age, qualifications, current salary and experience to date, and naming two referees, should be sent, not later than 3rd August, 1979, to the County Treasurer, Tyne and Wear County Council, Sandford House, Archbold Terrace, Newcastle upon Tyne NE2 1ED.

Our clients are located at Cockfosters, close to the Underground station (Piccadilly Line), and parking is a problem. Working conditions are congenial, and a favourable employment package is offered, including annual bonus and four weeks holiday. Due to expansion, career prospects are good.

Currently, in information systems for a unique service to the international shipping industry are being developed, including on-line applications using a mainframe with 250 MB on-line disc storage.

PROGRAMMERS
Up to £5,500

Upwards of two years' programming experience on ANY MACHINE is required, including substantial COBOL. The job offers the opportunity of involvement in management levels, taking responsibility and using initiative.

Please ring us in confidence for an initial discussion, quoting the appropriate reference. Messages after hours will be recorded.

EDP SYSTEMS LTD
52-53 Margaret Street, London W1N 1PA
Telephone 01.637 5796 (24 hours)

SYSTEMS PROGRAMMERS

GET TO THE CENTRE OF THINGS
in Surrey

As a Systems Programmer with our client you might be involved in the replacement of MFT with OS/VS1; in seeing the implementation of VM is successful; in helping with the installation of 4300 hardware. You might be evaluating t.p., database or other software products or controlling their implementation; providing consultancy or technical support to users throughout Europe; or providing support for a major message switching network.

The data centre is based in East Surrey. Using Honeywell, GA, IBM, Prime and Datapoint minis, with IBM mainframes, services are provided for clients throughout Europe and the Middle East, opportunities will therefore arise for overseas travel. Significant changes are taking place and successful applicants will be a part of and will make a contribution to these changes.

Candidates should either have a good systems programming background in an IBM virtual operating system environment or have solid message switching experience. Knowledge of t.p. monitors, databases or SWIFT would be an added bonus.

As you can see opposite a first rate benefits package is offered, including a starting salary negotiable dependent on experience and you would be joining a well-trained and professional technical group. To find out more telephone Capp Associates.

Positions open to male & female applicants, please telephone (24 hour service) for initial discussion or write to address below. QUOTE REF. CW160-9H

Limited

LONDON BOROUGH
OF BARKING

BOROUGH TREASURER'S DEPARTMENT

Computer Manager/ess

Grade P02(a)
£7,365-£8,109 inclusive
(pay award pending)

Applications are invited from suitably experienced persons able to communicate with and motivate staff. The Council has an IBM 370/125 with 4 disc drives and 2 tape drives, using RPG/II, and the ability to make full use of this installation and develop and implement new on-line systems and procedures is required.

Application forms from the Borough Treasurer, Civic Centre, Dagenham, Essex. Tel. 01-682 4500, Ext. 382.

Closing date: 8th August, 1979

MERSEYSIDE COUNTY COUNCIL

SENIOR
TECHNICIAN

(£4,773-£5,073 p.a. inc. supplement)

This post is in the Research and Forward Planning Section and is mainly with the computerisation of the individual's work and the presentation of this information in the form of a report or preparation of the Waste Disposal.

The successful applicant, who will possess an appropriate qualification in computer science, will be required to provide maintenance and computer services. Experience in interview techniques and with public bodies would be an advantage.

Application forms, returnable by 17th August, 1979, may be obtained from the County Engineer, 4th Floor, 127, Cannon Place, Liverpool L3 5EL. Tel: 051 227 8141.

Please quote Ref. No. WDS13 in all correspondence.

HARDWARE
PRODUCT
DEVELOPMENT

West Midlands

£8,000 + car

Our client seeks an experienced engineer, ideally with DEC or Data General experience, but other backgrounds will be actively considered, for an exciting career post.

You would produce, and support the marketing of commercial micro-systems which are a well-planned extension to our client's existing sizeable and successful microcomputer business.

You should offer a background in mini/micro computer technology, and be able to develop micro systems for general commercial use from components manufactured and supplied from a highly reputable and established source.

A knowledge of operating systems, diagnostic routines, and the ability to commission completed systems including software, would be ideal. Any experience in liaison with manufacturers and customers would be very valuable.

This unique position offers the real opportunity to progress into a general managerial role as the company expands to provide commercial systems in this rapidly growing area of computing.

The company has extremely detailed and accurate plans for the future of this venture, and intends to involve the successful candidate fully in the setting up and future of the organisation.

General condition, such as pensions, free sickness benefit, six weeks holiday, hardware familiarity training, and company car are well above average.

A small number of more junior posts may be available for hardware engineers with a minimum of twelve months' experience. So if your interests lie in micro systems, please contact Mike Hession, reference CW 185 for a strictly confidential discussion.

Recruitment Consultants

SYSTEMS ANALYST

£5922-£6537 (Review 1.7.79)

Applicants should have had at least two years' experience in all stages of systems analysis work and be familiar with ICL equipment. Public service experience would be useful but is not as important as broad experience of commercial applications.

THREE RIVERS
DISTRICT COUNCIL

SENIOR PROGRAMMER

£4968-£5763 (Review 1.7.79)

If you have had at least two years' experience of Cobol programming for Disc systems and Georgia II experience then we can offer you the opportunity to lead a small team engaged on the development of a variety of financial and non-financial systems.

Further details and an application form are available from the: Manpower Manager, Three Rivers District Council, 17/23 High Street, Rickmansworth, Herts WD3 1ET. (Tel: Rickmansworth 78611, Ext. 50)

PROGRAMMER

£3474-£4827 (Review 1.7.79)

With formal training in Cobol you could fill the above post. Ideally we would also like at least six months' experience and a knowledge of discs, paper tape and ICL equipment. However, we would also consider those who have recently completed an appropriate course.

The computer installation is a 32K 1901T with EDS 600 and the section is involved in important and varied financial and non-financial systems.

The benefits package include assistance with housing and a scheme of relocation allowances.

Test and Commissioning Engineers Test Engineers

GEC Computers Limited, the country's leading manufacturer of real-time computers, is expanding its recently opened manufacturing facilities at Ounstable, Bedfordshire.

Our success is largely due to the high quality of our products and our test and commissioning teams play a vital role in ensuring that standards are maintained. The work is technically challenging - the Company recently received the Queen's Award for technological achievement - and the men and women we are now looking for, will work on very advanced hardware and software using the latest automatic test equipment.

Test and Commissioning Engineers

to carry out fault diagnosis, repair, test, installation and commissioning work on processors, peripherals and microprocessor based controllers. Technical qualifications are desirable although not essential, but previous experience of similar work would be advantageous.

Test Engineers

to carry out test and quality control work at all stages from goods-inwards through to final acceptance testing.

Previous experience of similar work would be valuable.

Salaries are very competitive and other benefits include assistance with relocation where appropriate.

Telephone or write to Keith Halliday, GEC Computers Limited, Eynoult Road, Ounstable, Bedfordshire. Telephone: Ounstable (0582) 60222 extension 24.

BLUE ARROW EXECUTIVE, 3 HOLYWELL HILL, ST. ALBANS

Ground floor opportunity for top-flight talent.

Nexos is the newest entrant into the dynamic Office Systems market, dealing not just with word processing and office products but with total office systems.

We are looking for nine top salespeople with outstanding track records to grow with this newly formed company, and to grow into its management into the future.

Nexos knows good salespeople need good products to get their teeth into. Earnings will match the talent we want.

This is probably the best ground-floor opportunity the industry has to offer.

If you want to talk about it, send details to Muir Moffat, the Managing Director of Nexos, at the address below:

TREASURER'S DEPARTMENT

Senior Programmer

Your opportunity to acquire a PACKAGE to improve the quality of living:

- * A choice of home in an area which is inexpensive compared with many parts of the country.
- * Living in or near to a beautiful Cathedral City with quick access to the countryside and coast.
- * Earning a salary of up to £8,700 per annum with a national pay award pending.
- * Generous relocation expenses up to £1,500.
- * Present equipment is an ICL 1904S with 2904 (real time system link). RJE and 7502 intelligent terminals with replacement mainframe equipment currently under evaluation.
- * What we require from you is at least 4 years' 1900 programming experience using COBOL, discs, communications and Geo. 3 together with the motivation and enthusiasm to lead, co-ordinate and supervise the activities of a group of young programmers.
- * For further details of the installation and this key post that awaits the right applicant, telephone LES SANOS of the Computer Division (0522-28931 extension 62).
- * Application forms and job descriptions are available from the County Personnel Officer, County Offices, Newland, Lincoln (0522-24462) - please quote CT 88/71. Closing date for applications is 10 August 1979.

HAMPSHIRE COUNTY COUNCIL

SENIOR ANALYST/ PROGRAMMER

SO1/2 - £5232-£6080
(pay award pending 1.7.79)

We have a vacancy for a Senior Analyst/Programmer to work within a project team reporting directly to a Project Leader. The Senior Analyst/Programmer's function is to assist in systems analysis and design and to take programming responsibility for the team, supervising and training the other members. Applicants should have at least two years' sound programming experience for this post. Some systems analysis experience would be an advantage.

Hampshire is one of the largest local authorities and the Computer Division provides a service to all departments of the County Council which gives the opportunity to work on a wide variety of systems both commercial and scientific. There is sufficient flexibility for staff to apply and develop their own particular expertise.

The installation currently comprises two IBM 370/148s with communications equipment, terminals, and an off-line graph plotter. The system is run under OS/VS1 and C.I.C.S.

The Council's offices are situated in Winchester, a very pleasant part of South Hampshire, close to the South Coast and the New Forest.

The Authority operates a system of flexible working hours, has a staff restaurant and a Sports and Social Club. Assistance is given with removal expenses in approved cases.

Please quote reference 2883 when requesting application forms and further details from Departmental Personnel Officer, County Treasurer's Department, The Castle, Winchester, SO23 8J6, or telephone Brian Woodruff, Winchester 4411, Ext. 457, or Alice Lowery on extension 348. Closing date for applications: August 6, 1979.

HAD ENOUGH AS AN OPERATOR?

If you have, give us a thought. We're a service company looking for operators who want to do something else. You can use your operating experience as a springboard into administration and make a path for yourself into management, working for a company offering a unique service to the computer industry. We will pay you well while you do it and share the profits with you. So we operate shifts and work from Brentford, but that's nothing for your average superman to overcome.

Phone us for details. Anytime. At 01-568 2086.

£5250-£7250 + car

If you've got a couple of years programming experience and a problem solving outlook you can expect to enjoy unusually interesting, development-orientated work.

Fill in the coupon or ring Colin Miller on 01-903 1366, extension 246.

Operators

£5800-£6300 (incl. shift allowance)

A minimum of 2 years operating experience, familiarity with DEC equipment and sound communications experience can help you broaden your operating skills with MFI.

So fulfill your potential... fill in the coupon or ring Jim Shearer on 01-903 1366 extension 240.

In both cases, company benefits are good and working conditions pleasant and modern. MFI Furniture Centres Ltd., New Stadium Works, North End Road, Wembley, Middlesex

MFI

Are you ready to work in a really stimulating go-ahead computer environment? And on a personal level, are you anxious to employ your skills with a company that will give you the best return on the energy invested?

Yes? Then fill in the coupon and take the first step to joining the new Wembley Park Computer Centre of MFI, Europe's fastest growing retail furniture group.

We keep pace with our tremendous growth we are constantly upgrading our equipment and are currently adding a PDP 11/34 and a PDP 11/70 operating on a RSX system to our present hardware which will give us the capacity to support 280 terminals in 70 stores spread throughout the country.

We know where the good jobs are!

GREATER MANCHESTER

Systems Supervisor
Excellent opportunity for an experienced systems analyst to increase higher responsibilities. Previous experience of stock control systems useful. Programming background (COBOL) required. (DR/15)

Analyst/Programmer
These are first-class opportunities for young programmers who wish to develop their careers in the future in systems analysis. Previous experience required is 2 years COBOL. (DR/16)

Programmer
A substantial ICL installation seeks additional programmers. COBOL essential and IMS, TPS and Datastar useful. Prospects are excellent in this well known company. (DR/17)

Junior Programmer
A real chance to gain good experience in a progressive installation. Candidates should have not less than 12 months COBOL experience on any machine. (DR/18)

BOLTON

Programmer
First-class prospects in an IBM 370 installation operating under OS/VS. Minimum experience 2 years COBOL. CICS experience not essential but a bonus. (DR/19)

LEEDS

Systems Analyst
Large ICL installation urgently requires additional systems analysts with about 2 years commercial systems experience. Programming background useful. 2300 hardware to be installed early 1980. (DR/20)

Systems Analyst
Medium sized ICL installation with extensive expansion plans offers ambitious systems analysts excellent career development opportunities. Some previous programming experience useful but not essential. (DR/21)

Programmer
COBOL programmers with 18 months to 2 years experience are required by one of Yorkshire's leading ICL users. Previous ICL experience useful including GEORGE III. (DR/22)

Programmer
This client can offer young programmers a real chance to improve their prospects. 18 months to 2 years COBOL required. Previous ICL experience useful. (DR/23)

YORK

Junior Systems Programmer
IBM 370 installation offer an excellent opportunity to a young programmer wishing to specialise in systems programming. 18 months programming including some IBM ASSEMBLER required. (DR/24)

Trainee Analyst/Programmer
Graduates with good Honours degrees will be given first-class training for a successful career in data processing. Progressive IBM installation. No previous experience required. (DR/25)

HULL

Systems Analysts
A number of opportunities are available for systems analysts in the Humber area. Hardware involved includes IBM and ICL and industry/application range is wide. (DR/26)

Programmer
IBM user seeks meetings with programmers who have experience in an IBM installation. Company uses COBOL and PL/I in its 370 system. (DR/27)

NORTHAMPTON

Analyst/Programmer
This client is able to offer good opportunities to work on real-time systems for both financial and manufacturing applications. Programming experience should include BASIC+. (DR/28)

Sales Representative

c £15,500 + car

TSI is the Software Product Division of National CSS, the largest IBM based time sharing organisation in the USA. The European subsidiary based in London has a vacancy for a Sales Representative.

TSI products are TASK/MASTER (the most widely installed TP Monitor for IBM 360/370 machines in the world), KEY/MASTER, CICS/MM for CICS users and DOCU/MASTER. Other TSI products are in preparation.

The new representative will take direct sales responsibility for all TSI products and services in the territory allocated as well as for existing accounts. It will be necessary to liaise with the Custom Support teams and to acquire a specialist knowledge of all TSI products and on-line system technology for IBM 370/360 computers.

The requirement is for either:

- A candidate with an IBM system software background with the essential personality, drive and initiative to move successfully into a sales environment.
- OR a Software Salesman with a good track record, preferably in the IBM market.

A knowledge of teleprocessing software would be a considerable advantage.

This is an opportunity to join an established company in an expanding market. In addition to the package quoted, excellent staff conditions are offered.

To apply for the above position please contact Renée Nute on 01-242 9356 (daytime); 01-874 6372 (evenings/weekends)

OCC Computer Personnel Limited, 16, Bedford Row, London WC1R 4EB.

Have you considered
**working
in Europe?**

If you have a good IBM 370 background in Systems Programming, or TP/DB Applications Development, why not contact CDS to find out more about Working in Europe. We especially want to hear from applicants for these current project needs:

GERMANY - IMS DESIGNER/PROGRAMMER

to work on all project stages including analysis and design of a new Personnel System which will run under IMS DB/DC on a 3033. Applicants should have good knowledge of IMS DB/DC, or at least of DLI, and it would be an advantage if you have designed at least one database system already. Your programming experience should include either Cobol or BAL. As well as the financial and other attractions of working in a picturesque part of Germany, this assignment will provide a high degree of job variety and interest.

SYSTEMS PROGRAMMER - VSI or MVS

to undertake a consultancy project for a client with installations in both Belgium and Holland. You should have solid systems programming experience using either OS/VS1 or MVS, plus the ability to work on your own initiative. As well as the high rates of remuneration this position will provide an excellent opportunity to further extend your technical expertise, since in addition to moving to MVS our client has ambitious plans to install SNA for an extensive TP network.

For further details contact Jim Shaw at CDS, or on 0990 24546 evenings/weekends.

2 The Courtyard, Denmark Street,
Wokingham Berks. RG11 2BB.

EUROPEAN ASSIGNMENTS

Opportunities in Data Communications

Racal-Milgo Limited is a world leader in data communications and the largest private supplier in the United Kingdom.

The UK Division is responsible for providing a complete Engineering, Sales, Installation and Maintenance service to its customers. The tremendous success of the Division has led to a requirement for two new members in the Engineering support team.

Systems Engineer

To design total data communications systems for customers throughout the UK and to meet their varied requirements. Applicants should have sound communications experience, be able to function in a commercial environment and be able to work to deadlines. Qualifications to degree HNC level are expected and the preferred age range is 25-40.

Network Control Engineer

To gain expertise on the Company's network management systems and thereby give pre- and

post-sales support to all departments within the Division and to its customers.

A good communications systems background is required, allied to an appreciation of software. Applicants should be qualified to degree HNC level and be aged 25-40.

Both positions offer product training on the most sophisticated equipment available. Some travel within the UK is envisaged, so a driving licence will be required.

The attractive salaries and benefits packages will include generous leave entitlement and an excellent contributory Pension Scheme.

Write with brief details to:
D. J. Kichenaid, Personnel Officer,
Racal-Milgo Limited,
Prospect House, Thorn Street, Reading,
Berkshire RG1 7AP or ring READING (0734) 595314.

Britain's fastest growing electronics group

RACAL

Programmer

Hertfordshire

£6,000

The Company

Merk Sharp & Dahme Limited is part of an international organisation engaged in the production and marketing of chemical pharmaceuticals MSD UK is the largest supplier of prescription medicines to the National Health Service. It operates from 4 main locations its headquarters in Hertfordshire, Hertfordshire plants at Ponders End, Middlesex and Crickington, Northumbria and an animal research centre at Goss Green, Hertfordshire.

The Job

He/She will be a member of the systems development team and will work in close liaison with Systems Analysts through to project completion. This is a long, busy, stimulating job but some systems analysis is involved. Ample opportunity exists for job satisfaction and personal development. We are currently expanding our application base in the areas of marketing, materials management and employee administration. A large IBM System 38 is on order to replace a System 31/6.

The Person

Aged 22-30 with a sound RPG background-preferably on IBM equipment. Knowledge of COBOL and/or TP techniques would be of special value.

Compensation

An attractive salary to £6,000 plus good fringe benefits consistent with an international organisation of high standing and reputation. Generous relocation package where appropriate.

For further information and an application form contact Lyn Bonington in our Personnel Department.

Shift Leader

OPERATIONAL CONTROL
OF REAL TIME SYSTEMS

The Computing Services Division of the British Railways Board has a vacancy for a Shift Leader at their Nottingham Computer Centre. The position involves shift responsibility for the overall control and running of large on-line systems using IBM Mainframe and mini-computers.

The successful candidate will have an extensive Operations and Technical background in real time systems.

The commencing salary will be within the range £5,889 to £6,596.

There is a contributory pension scheme and the transfer of existing pension rights can, in most cases, be accepted. There are also free and reduced-rate rail travel facilities.

Applications stating age, education, qualifications and experience should be sent to:

Headquarters Staff & Services Manager
British Railways Board Headquarters
222 Marylebone Road,
London NW1 6JJ.
(Quoting Ref: RG233)

MINIS OR MICROS

Career openings with Software Sciences

The continuing success of the Software Sciences Group has created a variety of openings for career-minded designers and programmers. They include opportunities in both the mainstream of company activities and the exciting new area of microprocessor applications.

Programmers and Designers at Farnborough or Macclesfield

We have vacancies at a number of levels, from programmers with a minimum of three years experience to systems designers with, say, eight years plus in computing. Depending on your experience, specialist skills, and location preference, you will make an immediate start on one of a range of important projects in, for example, defence, business systems, or process control. In each of these areas we are industry leaders, and in any of them you will find all the opportunities you need for personal achievement, job satisfaction, and career development.

With a Group as diverse as Software Sciences there is likely to be an opening whatever your qualifications, but we are particularly looking for mini experience in either commercial or high reliability real-time applications. Your hardware background may be on DEC, Data General, Ferranti, Burroughs, or GEC; and you should have a comprehensive knowledge of one or more of Coral, RTL2, RSX 11M, Assembler, Basic, Basic +, or Argus or Burroughs software.

Microprocessor systems

Software Sciences has been at the forefront of the microprocessor revolution and has already successfully applied this new technology to a number of major projects including currency exchange, point of sale terminals, and the UK bookshop Teleordering system. We believe that our commitment to this area is second to none in the UK software industry, and even the United States is buying our application expertise in this field.

In Software Sciences Micrologic we have a total 'design and build' capability for the application of microprocessors. This creates exceptional prospects for programmers and designers who can contribute to our growth in this area. Vacancies are in Bedford and there are opportunities to develop your career in a number of ways, from microprocessor software specialisation to a variety of management roles.

If you are interested in any of these vacancies please send your c.v. to Sarah Chambers at our Farnborough head office, indicating your preference. Alternatively, you may contact her by telephone or letter for an application form.

MARCOL

Total capability from the Marcol Group
60 Queens Gardens London W2 3AF Tel: 01-402 9355 (24 hours)

Systems Designers Limited is a British Computer Systems Consultancy which, during the 10 years it has provided the industry with professional support, has established the highest expertise and credibility in the field of mini and micro based systems.

During this 10-year period, the company has grown to 200 professional staff in strength and retained its independence and its informal, though efficient, way of working. The company is still growing, enjoying expansion through a wide variety of work carried out in the U.K., Europe and the USA.

Currently we require Consultants, Engineers and Programmers with software and systems knowledge to help us solve the theoretical and practical problems of this high technology industry, mainly in the areas of:

COMMUNICATIONS Military communications procedures; voice, data and message network design; network management systems; message switching, telex and packet switching systems; computer communications protocols.

INDUSTRIAL Process control and monitoring; plant control simulation; high speed data analysis and distributed microprocessor system.

MILITARY Modelling, avionics and radar systems, complex rigs, simulators, microprocessor missile systems and signal processing.

SOFTWARE PRODUCTS CONTEXT software development systems, Ade Compiler design, MASCO implementation, Information retrieval systems.

VIEWDATA International Viewdate Centra, X25 packet switch links to external databases. New Viewdate products for USA and Europe.

CONSULTANCY Project Management, software and systems development technology, complex military systems and theoretical studies.

So, if you have a good academic background, at least one year software experience and are equal to the challenge, we will be very pleased to hear from you.

The company runs productivity bonus, insurance and pension schemes and also offers relocation assistance.

Telephone Ann Gregory for an application form and further information about the company or write to:

COBOL PROGRAMMERS— TIP THE SCALES IN YOUR FAVOUR!

Our client is a large internationally based manufacturing and marketing organisation renowned for the quality of its products. They make extensive use of computers and currently operate IBM mainframes and Ventek minis. An IBM 4341 is due for delivery in the Spring of 1981. To keep pace with an increasing workload, SEVERAL ANALYST/PROGRAMMERS ARE NOW REQUIRED. Experienced programmers interested in developing their careers along the systems path are invited to apply. If you already have analysis experience, however limited, so much the better.

THE UNIVERSITY OF LEEDS

UNIVERSITY COMPUTING
SERVICECOMPUTING
ASSISTANTS
AND EXPERIMENTAL
OFFICER

The University Computing Service is responsible for the provision of computing facilities to all departments within the University and will take delivery of a new mainframe computer around the end of the year. To be followed by the development of a campus network supporting large numbers of terminals. Applicants are invited for the following posts:

1. Computing Assistant to work on the maintenance and development of the University Systems software used by all students on the network (Ref 48/17/A2).
2. Computing Assistant to work mainly on evaluating, implementing and supporting computing systems and related software (Ref 48/18/A2).
3. Computing Assistant who will work on the development and maintenance of applications software, and also on the use of Ref 48/19/A2.
4. Experimental Officer to assist in the installation and subsequent maintenance of the University's communications network (Ref 48/20/A2).

Applicants should have a good honours degree or equivalent, preferably together with several years relevant post graduate experience. A higher degree could be an advantage. Appointments will be made for a fixed period of three years.

Salary at an appropriate point on the scale 12755-18265. The salary scale is effective from 1 October, 1979 and is subject to further review from that date.

Application forms and further particulars may be obtained from the Registrar, The University, Leeds LS2 9JT, quoting appropriate reference number. Closing date for applications 17 August 1979.

JOIN THE
PROFESSIONALS!

MODCOMP is one of Europe's leading suppliers of mini-computer equipment. Over the last 18 months we have doubled our installed client base and established manufacturing in the UK.

We are now seeking a **TECHNICAL MARKETING ANALYST** to join our UK business office in Coventry.

The successful applicant will be an enthusiastic committed individual capable of providing our sales force with a comprehensive pre-sales support function. He/she will work on proposals, benchmarks and configurations and be capable of making professional presentations to both large and small groups.

Suitable candidates will have a technical background on minis, preferably with emphasis on real-time and communications systems, and will enjoy generating technical solutions to meet clients' business needs.

Company benefits are excellent and include an attractive income package with a bonus scheme and company car, free BUPA and non-contributory pension. Relocation is possible.

For further information about this position ring Anne Campbell on (0734) 788711 or send a detailed resume to MODCOMP, Molly Millers Lane, Wokingham.

Senior Project
Leader, Systems
Bournemouth

On 1st January, 1979, Gresham Life went live on their new life assurance system based on a Hewlett Packard 3000 series 2 computer. The system operates in real-time utilising data base techniques. Expansion and development have created the new post of Senior Project Leader. The job holder, reporting direct to the Data Processing Manager and acting as his second in command, will primarily be responsible for user liaison and all system design.

Applicants, male or female, should have a minimum of three years' experience as a team leader, and at least seven years overall experience within systems analysis and design. He or she must also have proven experience in data base design and implementation. Experience within the life assurance industry or within a similar financial institution would also be a distinct advantage.

A competitive salary is offered together with other valuable fringe benefits, including relocation expenses (if appropriate), generous mortgage assistance, contributory pension, free life and sickness insurance, flexible working hours and luncheon vouchers. Career prospects are excellent. Write or phone:

COULD YOU HELP SHAPE THE FUTURE?

THE COMPANY

ITT the International telephone and telegraph corporation was founded in 1920 and is now one of the world's largest businesses. ITT is a diversified, multi-product company with manufacturing and/or sales activities in 86 countries. To maintain its current leadership in many areas of telecommunications, electronics, and other fields ITT needs specialised units with the capability to meet the rapidly changing demands of the telecommunications market thus IDEC — the international data engineering centre.

THE LOCATION

These appointments are based in modern offices in Fooks Cray which is on the borders of Kent and London, so offers the nearness of the capital together with the pleasures of the open countryside.

THE VACANCIES

IDEC are looking for people of all levels of expertise to join their expanding team of professional programmers, which is currently designing programs which generate software for telecommunications systems for customers throughout Europe. The software is currently being developed on an IBM 370/158 via data 100 terminals

THE REQUIREMENTS

They would like to talk to you, if you have a minimum of 18 months PL1 or assembler experience and are interested in developing future technology. As the software is developed on an IBM machine, any knowledge of this hardware would be an advantage. This experience could have been gained in either a commercial or a technical field.

THE FUTURE

The science of software production is still in its infancy which means these are tremendous career opportunities. Horizons are limited only by imagination. Given a concept technology can find a way to make it a reality, an economic reality, with ITT's multi-dimensional thinking an essential part of the process. This is not science-fiction, it is a realisable fact, today. ITT Business Systems is helping to make it all happen.

IDEC **ITT**
A Development Centre for
ITT Business Systems

This is what the future in communications will mean to you!

- ★ Starting salary to £7,500.
- ★ At least 23 days annual leave.
- ★ Discounts on many ITT products such as television sets, stereophonic and audio equipment.
- ★ Flexible working hours.
- ★ Subsidised staff restaurant.
- ★ Relocation expenses.
- ★ Modern offices near the countryside.

The future begins now, so why not pick up the phone and call Basil Pearce on 01-439 7871 for further details. If this is not convenient why not cut out the coupon and post it.

Please send me further details about the future with:

BOEING IS EXPANDING

Boeing Computer Services, is one of the largest computer service companies in the world, employing over 5,000 people. They came to the UK 4½ years ago, and are now looking to the next phase of expansion. Their UK operation is centred on Watford where over 100 of Boeing's people are based.

The Boeing record of success is impressive, success due entirely to the people who work there. If you identify with this kind of company and are looking for a positive career move, then this is your opportunity — don't waste it.

SALES EXECUTIVES

£10K+

The half year has gone — What chance for quote busting in 1979? Fed up with poor management? Inadequate support? Or out-of-date products?

- * Interactive Bureau (on minis)
 - * Batch Bureau (on mainframe)
 - * Excellent guarantees and multipliers
 - * Branch management for the successful
 - * + Car + Expenses + Pension + + + +
- Give me a ring and find out more NOW

30/1

BAL PROGRAMMERS

£ Neg.

The Boeing Airline System group is one of the company's most recent additions.

If you are the kind of person that enjoys Assembler level programming and maybe thinking of a change, then consider this:

- * Real time Seat Reservation System
- * On-Line Accounting Systems
- * Complex Engineering Database
- * Custom-built Applications
- * On-line programming facilities
- * Opportunities for International Travel

30/2

MOVE TO MINIS

£ Neg.

Naturally, Boeing use minis and in the UK that means PRIME 400

If you already know your way round COBOL, look what you could gain.

- * Custom-built and Package systems
- * Analysis experience
- * Small team environment
- * Sales support
- * Client Management

Want a real career in commercial computing? Then give me a ring NOW

30/3

Boeing is a big name with a big reputation. If you want to join them call me, GEOFF MARSH, on 01-499 4501 NOW

SALES EXECUTIVE TIMESHARING

£10K Basic Earnings Targets
£25K + Potential
+ Car, Expenses, etc.

There have to be some very good reasons for successful Salesmen to change companies mid year.

Some of the good reasons you can see above, but it is the way you achieve £20K+ that is significant.

- Multiples that double and treble your percentages and no ceiling on earnings
- Up-to-the-minute products including financial planning and databases
- First rate technical support
- No frustrating management structure
- Outstanding company growth

Plus, you do not need a timesharing background. If you can sell ideas, that is enough. Check the facts now by calling me, GEOFF MARSH, on 01-499 4501.

30/4

MIDLANDS AND LONDON

PROGRAMMERS AND ANALYSTS
£5,000-£8,000 in BOTH LOCATIONS
COMMERCIAL ON-LINE SYSTEMS

A major world-wide computer services group is setting up new Customer Service groups in both London and the Midlands.

The function of these centres is to produce custom-built applications for individual clients. Project size varies from one man month to several men years, ensuring involvement and variety for all team members. Career paths extend into Consultancy, Project Management and Man Management.

So if you are looking for a challenging, rewarding and secure environment with a real career potential give me a call, or send a comprehensive C.V. to the address below.

47/48 New Bond Street (entrance in Maddox Street) London W1Y 0HE Telephone 01-499 4501

TECHNICAL CONSULTANTS (DESIGNERS) ANALYST PROGRAMMERS • SENIOR PROGRAMMERS • PROGRAMMERS

CONSIDER the benefits

- A starting salary range of £5450 to £8250 p.a.
- A personal choice from 20 models of new company cars, for both personal and business use, that's if you want one?
- Free BUPA for you and your family.
- A non-contributory pension scheme and life assurance, plus the government pension.
- Six-monthly salary and performance reviews.
- Four weeks' annual holiday plus bank holidays.

MOUNCEY AND PARTNERS LIMITED
13/14 CORNWALL TERRACE
REGENT'S PARK, LONDON, NW1

CONSIDER these benefits within a company that

- Has a caring and highly personal relationship with all its personnel.
- Is successful and has a valued reputation for the quality of its DP consultancy work in Long Term Planning, Feasibility Studies, Strategic Studies, etc., as well as for its Systems Development and Implementation Capabilities and Skills.
- Undertakes application development work for clients, in-house at Regent's Park, on-site at client's offices in London and the Home Counties and also overseas.
- Works primarily with large users of mainframe computers, IBM, ICL, HONEYWELL, UNIVAC and NCR.
- Works in a solidly professional and ethical manner with clear commercial objectives.
- Promotes and develops its personnel on individual ability and personal qualities.
- Is the DP specialist company within a 1,300 strong International Management Consultancy Group.
- Where you can get excitement, job satisfaction and achieve your career development ambitions and actually enjoy yourself.

CONSIDER PICKING UP THE TELEPHONE OR WRITING TO
ROD EVANS (DIRECTOR), OR JOHN BIRCH (HEAD OF DEVELOPMENT)

MAJOR EXPANSION IN COMPUTER SERVICES

NOTTINGHAM

Albert Martin Group Services provide computing facilities to a large Nottingham based group of clothing manufacturers. Systems currently operate on an IBM System 34 with a network of remote terminals. A System 38 is on order for 1980 delivery.

Our success to date has led to user requests for a range of new applications to be developed. To satisfy these demands within realistic time scales we need to recruit the following professional personnel:

PROJECT LEADER

A complete self-starter, capable of demonstrating the full range of technical, commercial and managerial skills necessary for this key position.

SENIOR PROGRAMMERS

At least five years' effective program design and development experience in RPG II preferably on IBM machines. Assembler and/or Cobol knowledge would be useful. The people appointed must be able to exercise considerable initiative working closely with users and supervising programmers.

PROGRAMMERS

Minimum of three years' RPG II programming on IBM systems is required. Applicants must be ready to accept a new challenge in their careers, as they will be expected to develop to senior programmer status within 12/18 months.

Salaries for the above positions will range up to £7,500 p.a. with all the usual benefits associated with a large organisation. All positions will be based at the group's Nottingham computer centre, although travel to subsidiary company locations will be required. Generous relocation expenses will be available, if applicable.

Applications in writing should be addressed to:

G. J. Collins, M.I.D.P.M., Group Data Processing Manager
ALBERT MARTIN GROUP SERVICES LTD.
Lenton Lane, Nottingham NG7 2HZ
or Telephone Caven Thomas, Group Computer Consultant
on 0802 46332 to discuss the opportunities available

IMPERIAL COLLEGE DEPARTMENT OF COM- PUTING AND CONTROL 3 RESEARCH ASSISTANTS

Applications for a project funded by the National Coal Board on the use of distributed micro-computers for monitoring and control in collieries. A Research Assistant is required for each of the following areas:

- (i) A methodology for the specification and design of software for control applications
- (ii) The overall system architecture and operating system including the architecture of a single node
- (iii) The network interconnection structure and communication protocols

Candidates should have a degree in Computer Science and relevant post-graduate or industrial experience in formal software design techniques distributed real time systems or computer communications.

The appointments will be from October 1, 1979, and will be on the Research and Academic Staff (A) salary scale £4232-£1465 (junior level), plus £602 London allowance and USS. Applications including curriculum vitae and the names and addresses of two referees, should be sent to Dr. M. Sleeman, Computing and Control Department, Imperial College, 180 Queen's Gate London SW7 2BZ, by August 31, 1979. Additional information can be obtained from Dr. Sleeman or Mr. J. Kramer (01-659 8111, Ext. 2785) or at the above address.

MYRIAD ONE YEAR'S COBOL

N.W. LONDON (Near M1) **£4500-£5500**

Our client, one of the UK subsidiaries of a large American conglomerate, has recently installed an ICL 2803 and now require an enthusiastic COBOL programmer to assist in the implementation of a complete range of new systems.

As with most successful organisations, extensive dependence is put on the speed and accuracy of information made available to support company policies and decisions.

Probably seeking your second position in Data Processing, the successful applicant will work in a small and friendly installation where being a member of a small team will give you the opportunity of gaining total systems involvement and the possibility of gradually exercising your own analytical potential.

This is an excellent opportunity to consolidate your programming skills in a professional environment and is supported by the offer of a realistic salary and attractive company benefits.

3 NEW ANALYST PROGRAMMER OPPORTUNITIES

CENTRAL LONDON BASED

c£8000

Following expansion of our client's computer services department three key positions are now available for people wishing to grow with the department and progress their career within a dynamic and interesting environment. The company, part of a large international group, utilise an IBM 370 mainframe for systems development with the advent of distributed processing in the near future.

ENGINEERING SYSTEMS SUPPORT

This appointment will require candidates to de-
monstrate around 3 years' sound FORTRAN pro-
gramming experience ideally gained in an en-
gineering environment.
The person appointed can look forward to pro-
viding a programming consultancy service to the
engineering group and to leading the development
of new programs and installing specific application
packages.

COMMERCIAL SYSTEMS DEVELOPMENT

Applicants should possess at least three years'
commercial COBOL programming expertise, pre-
ferably from an IBM 370/OS environment with
some knowledge of financial systems develop-
ment.
The person appointed will be offered the oppor-
tunity to control total project development and
will be expected to perform fully in the analyst
programmer role.

ENGINEERING OPERATIONS CONTROL

Ideally candidates will be able to offer on-line ex-
perience and COBOL expertise.
Experience of stock control and equipment
maintenance systems will be an asset. The position
will require the person to become highly involved
with the support of the engineering operation and
the development of related information systems.

Company benefits are those commensurate with a successful business organisation and each of the positions offers an attractive career prospect for the
forward-thinking computer professional.

Today's Computer Operations staff are tomorrow's specialists

Today's fast moving computer industry can still offer go-ahead men and women the opportunities to rapidly progress to senior and specialist areas. With such unlimited prospects, computer staff at any level must be ambitious.

Here at GRIP we can offer computer professionals some of today's most exciting futures in the industry, with every opportunity for early career development.

We are the computer services company within the Grand Metropolitan Group, an organisation comprising of some of today's biggest names. Our expansion has been so successful and constant that re-organisation and internal promotions have created a number of real career openings. Here are two positions offering computer professionals the chance to share in our success.

Shift Operations Technician Upwards of £5,250

You will be an ambitious professional looking for the next step in your career - you may already be a high-grade Operator - and should possess substantial IBM experience. This is a challenging role and you will need JCL knowledge. We will give you a thorough technical training on our IBM 3031 and ITEL AS5 mainframes.

Senior Operator Upwards of £5,250

This is an excellent opportunity for someone with proven IBM skills. Opportunities for supervisory experience exist as you will be expected to deputise in the absence of the shift leader. We operate a 3 shift system and our mainframe consists of an IBM 3031 and an ITEL AS5 using OS/VS1 with CMS, and VM and RJ facilities - so VM knowledge would be an advantage.

For the right people benefits are excellent and salaries here are guidelines - whatever you're worth we will match it.

If you see yourself as one of tomorrow's computer specialists contact us today. Miss P. Donoghue, Personnel.

the computer power behind Grand Metropolitan

HAWKER SIDDELEY

Brush Switchgear Limited Systems Analyst

Location: Loughborough, North Leicestershire.

Brush Switchgear Ltd are manufacturers of electrical distribution switchgear of up to 13.8 kV. We are looking for a Systems Analyst to join our small team of Analysts and Programmers who are currently engaged on the conversion from a shared 1904A to our own 80K ICL 2904 computer. The conversion is scheduled for completion by the end of this year. Next year will see the start of a new systems development programme which will capitalise on the on-line facilities offered by the 2904 running with Telecomputing's TPS software package.

Because of the small size of the team, the work is varied and all aspects of systems development work are encountered. In addition, the use of Telecomputing's Interactive Development System provides the team with powerful on-line development facilities not normally associated with a machine of this size.

The position would therefore suit someone with one or two years computer experience, who would now benefit by joining a small team to broaden his or her experience.

An attractive salary with productivity bonus is offered together with generous company benefits, including the use of outside courses to ensure that the knowledge of the staff is continuously updated and expanded. Relocation expenses would be paid if appropriate.

Interested people are asked to ring either Mike Chislett or Derek Coombe on Loughborough 83131 Ext. 519 for further information or obtain an application form from:

R. Newton, Personnel Officer Employment,
Brush Switchgear Limited, P.O. Box 19,
Meadow Lane, Loughborough,
Leicestershire LE11 1HL.
Telephone: Loughborough 83131 Ext. 499.

UNIVERSITY COLLEGE LONDON

CHIEF COMPUTER OPERATOR AND SHIFT LEADER

Wanted to work with a challenging new system of several linked GEC 4092 computer plus an IBM 380/55. At least 3 years' suitable experience with other mainframe or mini computers is required, plus an ability and willingness to learn new systems and organise junior staff.

The Chief Computer Operator will be responsible for all aspects of the efficient operation of the machine including the definition of procedures and supervision of staff training. Salary, including London Allowance, will be paid on the scale £5002-£5572 (currently under review).

The Shift Leader, needing a minimum of 3 years' operating experience, is required for a 2 shift role. Salary including London Allowance and Shift Allowance will be paid on the scale £4303-£5529 (currently under review). Both positions include over six weeks' annual holiday.

Please write giving details to:
Yvonne Outan, Operations Supervisor,
Computer Centre, University College London,
17-18 Gordon Street, London WC1H 0AH
or telephone 01-397 0855.

NATURAL ENVIRONMENT - RESEARCH COUNCIL

NERC CENTRAL COMPUTING GROUP

ASSISTANT SCIENTIFIC OFFICER

The NERC Central Computing Group has vacancies for an Assistant Scientific Officer to work at the Rutherford Laboratory, Chilton, near Didcot, Oxon.

The post will involve providing general user support for the Univac computer. Specific responsibilities include support of existing major software systems, fault finding and job tracking when problems arise.

Minimum educational qualifications for appointment are a GCE 'O' Level pass in English Language and a Scientific/Mathematical subject. Candidates should normally be under 26 years of age on 31st December, 1979.

Salary £2 074 p.a. at age 18 rising to £3 880 p.a. at age 21, £3 108 at age 22 rising to £3 818 p.a. at age 23. August 1979. These scales will be reviewed in January, 1980.

Only travel facilities are available from the Rutherford Laboratory to most of the neighbouring towns and villages. Recreation and recreational facilities are provided.

Staff of the Council are not Civil Servants but enjoy pay and conditions of service comparable to Civil Servants.

Application forms may be obtained from Mr. Young at RHEC, Rutherford House, North Star Avenue, Winton (Tel. 0783-46101). Completed applications, with three recent photographs, should be received by 10th August, 1979.

CITY OF LONDON POLYTECHNIC

COMPUTER SERVICE

The Polytechnic's Computer Service Manager is looking for two more bright young people to join his 30-strong team based in The Minories EC3, close to Fenchurch Street station and within easy reach of Liverpool Street station.

COMPUTER OPERATOR

Ref 78/841

The successful candidate for this post will join a team operating at present on a two-shift basis. Preference will be given to applicants who have had operating experience on a large multi-access installation.

Salary: in the range £2045-£4717 (including London Weighting) plus a shift allowance of £284 p.a. Basic salary and London Weighting both currently under review. Starting point will depend on experience and qualifications.

COMPUTER ASSISTANT

Ref 78/856

The successful applicant for this post will perform various support duties to help ensure the smooth running of the Computer Service. A school-leaver with an aptitude for computer work will be considered.

Salary: in the range £2230-£2888 (including Weighting). Starting point depending on age, qualifications and experience. The basic salary and the London Weighting element are under review.

Good conditions for both posts include pension scheme, gratuity and training facilities and annual leave which amounts to 4 weeks and 1 day, plus one additional day each calendar month.

For further details and an application form please apply to the Staff Records Office, City of London Polytechnic, 117 Houndsditch, London EC3A 7BU, quoting the relevant reference number.

THE UNIVERSITY OF LANCASTER

Applications are invited for the post of PROGRAMMER in the DEPARTMENT OF COMPUTER STUDIES.

Experience of the following would be an advantage: PASCAL, machine code programming and/or Data General NOVA software.

Salary in the range £3775-£6356.

Further particulars can be obtained by quoting reference L154/C1 from the Establishment Officer, University House, Lancaster LA1 4YW, to whom applications (5 copies) naming three referees, should be sent not later than 27 August, 1979.

MANAGEMENT SERVICES DEPARTMENT

The City Council operates on ICL System 4/50 and a Univac 1108 with terminal network on a two-shift basis. We now require the following staff to work in the operations area:

Computer Operator

£295-£8768 (under review) Grade AP4 (Ref: MS21)

The successful candidate will preferably be an experienced System 4 operator, but a Univac 1100 or IBM background would be considered. Minimum requirements are 5 'O' levels (including English and Maths) and 3 years' experience in computer operating.

Junior Computer Operator

£4407-£5002 (under review) Grade AP1 (Ref: MS22)

The successful candidate will preferably have at least 5 'O' levels (including Maths and English) or one year's experience of data processing. He/she will also be expected to have a basic understanding as to what areas a computer could be used for within a Local Authority.

Both these posts are in a career progression scheme where advancement is based on performance, experience and achievement. Training will be given where appropriate.

There are excellent benefits including:

— up to 24 days' annual leave, PLUS an extra day off every four weeks

— interest-free annual season ticket loan

— subsidised canteen

— close to Victoria main line, tube and bus terminals

To obtain application form please send postcard, telephone or call the Personnel Management Division (quoting appropriate reference number), PO Box 240, WESTMINSTER CITY COUNCIL, City Hall, Victoria Street SW1E 9QP, telephone number 01-834 8889 (24-hour answerphone service).

Closing date 9th August, 1979

Operations Specialists

for brand new data centre in Oxford Street

Colgate-Palmolive, the international consumer products company is a fast growing organisation with widely diversified interests and to maintain a high level of operational efficiency throughout our commercial and manufacturing activities we make extensive use of computers in virtually every department.

We're now setting up a data centre based on a brand new Honeywell DPS100 system with an extensive on-line communications network linking our headquarters with depots and manufacturing plants throughout the U.K.

The establishment of this data centre means that we now need to appoint additional experienced DP personnel to fill the following positions:-

Database Controller

To be responsible for the Operations Manager for formulating and maintaining the efficient structure and content of the database; co-ordinate systems/programming personnel and users with regard to future extensions and assist non-technical users by setting up enquiry facilities over on-line terminals.

The position will call for experience of database design, including a good knowledge of the Honeywell IDS language; familiarity with back-up and security systems for data files, and file management software and operating systems. Good communication skills are essential including an ability to instruct junior staff in data-base techniques.

Network Controller

To maintain in good working order the existing communications network and subsequent extensions in order to provide a continuous service. It will also involve dealing with faults and maintaining close liaison with equipment manufacturers suppliers and the Post Office in regard to new extensions and fault tracing.

A good knowledge of modern communications equipment and techniques including terminals and modems and associated equipment developments is essential, coupled with an ability to trace faults and liaise with suppliers.

Junior Systems Analyst

To assist the Technical Service Supervisor in achieving optimum computer throughput including assisting in the maintenance and testing of operational systems; maintaining and testing new software modules; assisting programmes and engineers in tracing and curing faults. Other responsibilities will include operator and on-line user training and assisting other staff in the efficient use of job control language and file management.

It is an exciting new project and the career opportunities for both men and women with relevant skills and experience are therefore excellent. Salaries are highly competitive and the benefits attractive including generous discount on a wide range of Group products.

Write with full details of your experience, stating which position interests you, to Mark Parker, Personnel Officer Recruitment at Colgate-Palmolive Limited, 76 Oxford Street, London W1. Telephone: 01-580 2030.

PROJECT CO-ORDINATOR

AN EXCITING FUTURE IN THE DEVELOPMENT OF OFFICE COMMUNICATION SYSTEMS!

ITT is a market leader throughout Europe in the field of sophisticated office communication systems. I.D.E.C. was set up to specialise in providing the software expertise for the many different systems. This particular unit specialises in the development of highly sophisticated systems for translating customers requirements onto their hardware.

The job will involve liaising with systems houses and other I.D.E.C. units, upgrading of the Database used by the software production centre, and qualification of the first generation product support system for I.T.T.'s electronic P.A.B.X.

This appointment is based in modern offices in Fooks Cray which is on the borders of Kent and London, so offers the nearness of the capital together with the pleasures of the open countryside.

The person they are seeking will have a minimum of three years' experience of computer based projects, be a self starter and preferably have education to degree or H.N.C. level, although somebody with greater experience, without qualifications, would also be of interest.

The science of software production is still in its infancy which means that there are tremendous career opportunities in the field. I.T.T. has a record of past innovation and achievement, present investment in research and development will help fashion the shape of things to come.

This is what the future in communications will mean to you!

- ★ Starting salary to £7,500.
- ★ At least 23 days annual leave.
- ★ Discounts on many ITT products such as television sets, stereophonic and audio equipment.
- ★ Flexible working hours.
- ★ Subsidised staff restaurant.
- ★ Relocation expenses.
- ★ Modern offices near the countryside.

ICL COBOL PROGRAMMERS

City to £7000
We have been retained by several companies operating a range of ICL installations covering all commercial applications who need programming staff at varying levels to continue their expansion programmes. The benefits offered vary, but many include the valuable SUBSIDISED MORTGAGE. So if you have a minimum of 12 MONTHS' COBOL experience and are looking for a change, why not give us a call today.

Reference BP 30/1

IBM COBOL PROGRAMMERS

Middlesex c£6000 + 5% Mortgage
A large Insurance group operating an IBM 370 installation is seeking several programmers with a minimum of 18 MONTHS' COBOL who are looking for a more dynamic environment where they can utilise and expand on their experience. The Company offers an extremely good starting salary, £1 a day L.V.'s, non-contributory pension, car park, sports club, plus of course the 5% MORTGAGE!!

Reference BP 30/2

SYSTEMS ANALYST

Middlesex to c£7500
A large shipping and insurance group is seeking a Systems Analyst to join their small and friendly team, which operates an expanding ICL installation, with a new machine arriving shortly. The person they are seeking should have approximately three years' analysis experience and possibly a programming background, although this is not essential. The company offers excellent starting salaries together with extremely good fringe benefits including L.V.'s, season ticket loans, BUPA etc.

Reference BP 30/3

FINANCIAL PROGRAMMER

Midlands to £6500 + BONUS
A major manufacturer with installations all over the U.K. are currently seeking a programmer to work in their financial software development area. The ideal applicant will have had a minimum of 2 years' programming experience on financial application within a recognised financial institution such as a Bank or Insurance Company. This is an excellent opportunity for a programmer with either a Mainframe or Mini background to be involved with new developments on Mini's. The company offer a very good starting salary coupled with various fringe benefits which include a bonus scheme.

Reference HK 30/4

BASIC + PROGRAMMERS

City to c£7000 + Mortgage
An International Banking Group require all levels of BASIC + Programmers to be involved in their new MINI projects. A minimum of 3 years' experience in BASIC + is required or, alternatively, good experience in other languages would be considered for people who wish to enter the MINI field. The Company have several DEC PDP 11 Machines coupled with large IBM Mainframes. Other attractions include flex-time, Bonus, subsidised Mortgages, and loans after 6 months.

Reference HK 30/5

MINI ASSEMBLER PROGRAMMERS

West London to £7600
A small but rapidly expanding Software House based in London are currently seeking Assembler Programmers with a commercial background to work in Customer Support role. If you have around 3 years' Assembler experience on either Mini's or Mainframes and would welcome involvement on a client contact basis then this opening would be of interest. The Company offers good salary plus paid overtime and the chance to move into Analysis.

MYRIAD

SYSTEMS ANALYSTS

SW LONDON

£8000-£9500

Having recently made a substantial investment in new hardware our client is now seeking two Systems Analysts to play a prominent part in the Company's new development program. These positions present an outstanding opportunity for experienced analysts to gain total systems experience with the prospect of progression to project management utilising advanced equipment and communications techniques.

One Analyst will initially have responsibility for developing a multi-Company Nominal Ledger system for subsidiary companies throughout the UK and overseas. The other Analyst will be involved with the feasibility of a new system to provide management with profitability and marketing statistics.

Applicants should be experienced analysts with knowledge of financial applications seeking greater challenge and a rewarding career in one of the foremost installations in the country. Used to working to high standards the successful candidates will enjoy functioning in user oriented situations and be capable of leading project teams. Conditions of employment are excellent and accompanied by a range of large company fringe benefits.

Analyst/Programmer for a new Computer Team

Cheltenham Spa around £6,000 plus relocation.

Endsleigh is the U.K. subsidiary of a prestigious insurance group based in the Netherlands. Formed in 1965, the company now holds a leading position in the student and academic market with over 50 insurance centres throughout the country.

We have recently installed an IBM System 34 computer, and we are now in the process of building up our computer team. It is a young, dynamic environment and we are already making plans to install an IBM System 38 in order to meet our ambitious computer development plan.

The successful applicant will play an important role in the development of our computer systems, and should have around five years experience in Data Processing with at least two of those spent in detailed analysis work.

The ideal candidate will have a sound commercial background preferably in the insurance industry, and should have experience of high level computer languages, particularly RPG II. Some experience of IBM CSD would also be extremely useful.

The company has an innovative approach to insurance, coupled with a highly progressive attitude to staff conditions in addition to a negotiable salary, benefits include free pension, life assurance and permanent health insurance schemes and an attractive modern environment.

If you think you can make a contribution to a successful young company, then write to our Assistant Personnel Manager, Alan Marry and tell him why.

OEM SERVICE SUPPORT MANAGER

c. £7,500 + estate car + pension + P.P.P.

An established manufacturer of Magnetic media peripheral equipment is opening a direct U.K. and Scandinavian Marketing Office and requires a Service Manager.

This is an excellent ground floor opportunity for a person of proven service capability to mini computer peripherals. The ability to conduct training courses would be an advantage.

A good career progression and excellent total remuneration package will be offered to the right person.

Location will be Berkshire.

Please reply to Box 1041, Computer Weekly.

Rank Strand Electric require a Software Engineer

Rank Strand Electric through their U.K. base and associated overseas companies are the world leaders in theatre and TV lighting and control equipment. Mini-computers and micro-processors are already extensively used in the current product range, extending from simple 6800-based to multi-processor arrays hosted by a PDP 11/34.

To support this equipment and to develop new products, taking advantage of the next generation of micro-processors now becoming available, we need a Software Engineer to strengthen our team. The ideal person would have 2 or more years' experience in programming mini of micro-computers in assembly language for real-time applications, and experience in systems design and analysis. A good grasp of the technology and interfacing methods of micro-processor systems is required, as is the ability to liaise easily with electronics and system engineers ensuring rapid and successful development programmes.

A general education to degree standard, or less but with experience in lieu, is expected. This post is open to both men and women.

Normal large company benefits apply, with subsidised canteen and social club.

For further details and an application form please write to: Rank Strand Electric, Mrs. Hutchings, Senior Personnel Officer, Rank Strand Electric, PO Box 78, Great West Road, Brentford, Middlesex. (Telephone 01-568 9222).

RANK STRAND ELECTRIC

ASSISTANT TO COMPUTER OPERATIONS SUPERVISOR

c. £5200

Due to expansion a position has arisen in the In-House Computer Department of our new H.O. building administration offices for an experienced Computer Operator to assist the Computer Operations Supervisor.

The successful applicant, aged 22 or over, will have had one year's disk experience, preferably including NIXDORF equipment and will have a responsible outlook to his/her work.

Working in an installation including NIXDORF/DBO PDP11 and DATAPoint equipment, the main function will be to correctly process daily work schedule as supplied.

Basic hours of duty will be from 12 noon to 8.00 p.m. Monday to Friday, which will require an ability to work on own initiative.

As well as a good starting salary, we offer excellent working conditions, pension, life assurance, discount schemes, an excellent subsidised restaurant and a planned first-class social club.

For application form please apply Mrs. S. Parker, Staff Personnel Officer, Charrington and Company Limited, Anchor House, 110 East Road, London E1 4UL. Telephone: 01-790 1860.

after your holiday.... ...why not a NEW CAR and a NEW CAREER

THE COMPANY are a household name and world leaders in their field. Their European headquarters are located in a brand new modern building situated in the western home counties and easily accessible both from London and more rural areas via the M3 and M4 motorways and convenient to a main line railway station. Our client's outstanding success is the combination of a highly professional, young management team coupled with an aggressive, innovative marketing image, backed by first class support from their computer systems area. A large IBM mainframe forms the base for the development of a number of on-line systems including a large overseas on-line network.

Due to increasing new development work the following three vacancies occur

SYSTEMS ANALYST to £7,400 + Car

At least two years of systems design and implementation, coupled with a flexible approach and the ability to "think on your feet" could gain you a key position in one of our clients project teams developing systems on a European basis.

QUALITY ASSURANCE ANALYST to £6,700 + Car

This new position within an independent standards and assurance function may suit Analysts or Programmers wishing to move into the expanding and challenging field of computer audit.

You will require 4 years + COBOL experience gained in an IBM OS environment coupled with the ability to contribute towards the development and subsequent auditing of standards and procedures in the field of program development.

LEAD PROGRAMMER to £6,700 + Car

This position will require 4 years plus COBOL experience gained in an IBM OS environment, coupled with the ability to lead a team of programmers and be involved with the initial design of systems. As our clients will offer you involvement with mini-computers, real-time experience would be a decided asset.

THE REWARDS are practically unbeatable and, in addition to a competitive salary and company car, will include free BUPA, non-contributory pension and superb working conditions.

So give yourself something to look forward to after your summer holiday and contact REX SCOONES at our Croydon office for full details on the company and the vacancies.

Positions open to male & female applicants, please telephone (24 hour service) for initial discussion or write to address below. QUOTE REF. CW161-9S

NEWCASTLE UPON TYNE
DEPARTMENT OF
ELECTRICAL AND
ELECTRONIC ENGINEERING

COMPUTER AIDED DESIGN OF V.L.S.I. SYSTEMS

Applications are invited from graduates with a good honours degree in Electronic Engineering or Computer Science to work on a project involving the evaluation and improvement of design aids for V.L.S.I. The department will have a colour graphics system exclusively for this project including a high resolution display and four colour plotter linked to the University's main frame computer.

The work itself will be carried out in collaboration with industry to develop aids to interactive layout, simulation and the management of the complex design problems associated with the next generation of integrated circuits.

Posts are available as follows:
1. Research Associate - £A 14,333-£7,521 p.a. starting at a point not higher than £4,910 for a period of two and a half years from 1st October 1979, with membership of the appropriate University superannuation scheme.
2. S.R.C. CASE award Studentship in collaboration with the Plessey Company Limited. There will be opportunities for travel both in this country and abroad in connection with the project.

Further information is available from Professor D. J. Kinnmont, Department of Electrical and Electronic Engineering, The University, Newcastle upon Tyne NE1 7RU, telephone 0632 2661 ext. 2325, with whom applications (3 copies) together with the names and addresses of 3 referees, should be lodged not later than 14th August, 1979. Please quote reference CW.

Western Australian Institute of Technology
School of Business & Administration

DEPARTMENT OF COMPUTING AND QUANTITATIVE STUDIES (Permanent Appointments)

Lecturer in SYSTEMS DESIGN
(Salary range £518,237 — £510,821)
(19th July Exchange Rate)

The lecturer in Systems Design is required to teach and develop subjects and courses in both batch and real-time systems design; the structured approach to analysis, design and programming; life structuring techniques including data base; data base design alternatives; system security; on-line data entry; information retrieval; and high level languages, in particular COBOL. (Ref. No. 225)

Lecturer in COMPUTERWARE
(Salary range £518,237 — £510,821)
(19th July Exchange Rate)

The lecturer in Computerware is required to teach and develop subjects and courses in computer hardware including large main frames, peripherals, minis, micros and world processing; computer software, including operating systems and utilities; programming languages including macro ASSEMBLER, FORTRAN and BASIC; contemporary developments in hardware and software and their particular application in business data processing. (Ref. No. 226)

Qualifications: Applicants for permanent lecturer positions should have a first degree as well as extensive relevant experience and an ability to communicate at the tertiary level. Evidence of capacity for self-development is desirable.

Conditions include: Fees for appointees and family plus some assistance for removal expenses. Superannuation is available for staff with permanent tenure. The positions are permanent; however the lecturer is transferred in rotating applications from persons preferring a limited term (1-3 years) appointment. Return fares are provided for staff appointed for a limited term.

Applications: Details including the names, position titles, and addresses of three referees should be submitted not later than 24th August 1979 to the Migration Liaison Officer, Western Australia Post, 118 Strand, London WC2 0AJ, England. A brochure containing further information may be obtained from the above address.

When applying please quote position reference number and the media code CW5

Computer Professionals

To meet an ever increasing workload our client, a large scale data processing installation based on the Eastern side of Birmingham, is looking for experienced operations staff. The system to be operated is VME/B on an ICL 2876 and a full range of peripherals is supported including offline OCR machine and graph plotter. There is also an extensive communications network serving RJE and MAC.

Senior Computer Operators
Earnings up to £4,750 (including shift allowance) Ref. AK1

Required to help the shift leader in the efficient running of the computer room and will often have total control of the operations for significant periods. Applicants should have a minimum of three years experience of a large computer system including some at a shift level. A three shift rotating system covering the hours 23.00 Sunday to 19.00 Friday.

Candidates should have an appreciation of operational problems and/or an operational background and have experience in supporting remote users. They should also have the ability to work with minimal supervision and be able to liaise effectively with senior members of other sections of the Data Processing Department.

The Data Processing Installation is housed in a modern office block and all jobs offer opportunities for promotion and career development. The conditions of service are excellent and a substantial salary award is currently being negotiated. Please apply in writing to Position Number ABC804 Austin Knight Limited, Treorchy House, 31-33 Hagley Road, Edgbaston, Birmingham B15 8TP, quoting appropriate job reference number.

Applications are forwarded to the Client concerned, therefore Companies in which you are not interested should be listed in a covering letter to the Position Number Supervisor. Closing date: 7th August, 1979.

AK ADVERTISING

As a result of the acquisition of a new Honeywell Level 64 computer, Franklin Mint Ltd., the U.K. division of the world's largest private mint, are seeking to recruit a:

COMPUTER OPERATOR £4,650 (including shift allowance)

We operate an attractive shift system which entails working only 3 shifts per week for two out of every three weeks.

Applicants should ideally have a minimum of 12 months' experience operating either a Honeywell Level 64 or Level 66 operating under GCOS. Alternatively we would accept experience of any medium/large IBM main frame system.

In addition to the salary, we operate a non-contributory pension scheme, free life and permanent health insurance, free BUPA and give L.V.s, a maximum of 20 days' holiday and a non-contractual bonus.

We will be commencing interviewing in the very near future, so if you are interested, please telephone Peter Brown now on 01-697 8121 or write to him at the address below.

Please read this

We at CMG cannot understand why you have not applied to us yet for a job.

Perhaps you see our ads so often that you have stopped reading them

We do advertise frequently but we do need a lot more people to achieve the £6,000,000 of growth planned for this year.

Perhaps you do not want to work in the service industry

The Service Industry is different and you either love it or hate it. We love it — perhaps you would.

Perhaps you do not believe the high salaries that we offer

Independent surveys have consistently shown that our staff are amongst the highest paid in the industry.

Perhaps you are not sure whether your experience is relevant to our needs

We require computer professionals with a minimum of 2 years' commercial systems and programming experience. At the top end of our scales we are looking for solid consultancy and management experience as well. We have a wide range of salaries (£5,000 to £11,000) because we have a wide range of requirements.

Perhaps you are uncertain of what we can offer you

We offer a wide variety of challenging work from programming through to consultancy. We work with minis and mainframes and with a variety of customers and applications. All promotion is from within and is based purely on ability. Our commitment to growth ensures excellent promotion opportunities. The CMG atmosphere is both professional and informal and everyone is encouraged to participate in the affairs of the company. There are profit-sharing and share-purchase schemes.

Perhaps we will hear from you soon

If you would like more details please telephone either of the numbers below or write for an application form to:-

Recruitment in Informatics

Message Switching & Communications France

Salary: to £17K

A prestige German client wishes to expand and establish a small specialist project team working in the areas of Data Communications and Packet/Message Switching. This is a very rare opportunity to enhance your career by extending your social horizons and developing State-of-the-Art D.P. technology whilst having the benefit of living in a country where there is little D.P. recruitment for U.K. nationals. Successful

candidates will be either graduates (Computer Science or Maths) or have in-depth knowledge in advanced computer applications. You will probably be employed as a Systems Designer or Software Programmer in a Mini-computer environment with extensive Assembler experience. Those candidates who have a working knowledge of either French or German will be especially welcome. Ref: A/26/07

PL-1 Programmers City of London

Salary: to £9K + package

A "blue chip" international financial institution based in The Square Mile is expanding its team members and consequently requires PL-1 Programmers and Analysts/Programmers. Ideally you should offer 18 months experience of PL-1 applications under OS/VSI/VS II and preferably have recent involvement in either teleprocessing or Data Base techniques. Of particular importance is the ability to work as a member of a

specialist project team under strict documentation and programming standards. A second programming language (COBOL or Assembler) would be considered advantageous particularly for forthcoming distributed processing developments. Our client offers a subsidised mortgage, personal loan scheme, excellent pension and health schemes. Interviews will be held in London in early August. Ref: B/26/07

Cobol Programmers Middle East

Salary: £16K (Tax Free)

A recently opened subsidiary of a Scandinavian Computer Services organisation requires top flight COBOL Programmers. Particular hardware or applications experience is not important but recent experience of either IBM or ICL machines is most useful. You will relocate (either on a married or single basis) to one of the better Middle East locations which offers considerable social and holiday attractions on a par with those found in Europe. In addition to a tax free

salary, you will be provided with excellent free accommodation and a car allowance whilst the holiday entitlement amounts to half yearly and yearly paid air tickets to the country of origin. We will be holding first interviews in London after which the client will conduct a final session by the end of August. For expatriate candidates, we will be happy to accept a detailed resume. Ref: C/26/07

Cobol Programmers West London

Salary: £5.5-£7K

Our client, a U.S. multinational corporation who are leaders in their field, are about to install sophisticated E Series IBM hardware. As a result of this expansion they require COBOL Programmers with 2-4 years experience to work on the implementation of a new distributed processing network. Training will be given in on-line/Real-Time applications and projects will include stock control, order processing, payroll and financial systems etc. This is an excellent opportunity

for candidates to gain experience in the implementation of a new system or for those wanting to progress into the area of Systems Analysis and to develop their skills in the areas of T.P. and Database applications. Additional to above average salaries, benefits include 4 weeks holiday, free BUPA, staff restaurant and Life Insurance scheme. Interviews will be held within the next two weeks and offers will be made within 7 days thereafter. Ref: D/26/07

Analysts + Programmers London + Manchester

Salaries: £6-10K

Our client is a major international company recognised as market-leaders in its field and has retained Logistix to assist in recruiting the following key project-team specialists: Real-time Mini Programmers, Database Designers, Compiler Specialists, Communications Experts (Mini and Mainframe), Applications and Software Programmers. Experience of any of the following will be especially welcome: RSX II, RTL II, BASIC, ASSEMBLER, PL/I.

COBOL, IMS or other D.B. For those who enjoy overseas travel, there will be ample opportunity to visit European and Middle-East locations at which our clients have offices. Successful applicants are likely to demonstrate qualities of leadership potential, determination, and be self-starters. It is anticipated that you will achieve very rapid promotion with this prestigious company. Interviews will be held in London and Manchester during August. Ref: E/26/07

30 Baker Street

London W1M 2DS

What would it take to shake you out of your cosy software house?

Well, prepare to have your answers gently twisted. Having lived a plump life in a good software house, you're certainly going to need some persuasion before you leave. How would you like the idea of having involvement in micro and mainframes, the basis of some of the most complex real-time systems in the world? Imagine working in an environment where growth is so fast that you'd have a just-to-grow-and-never-leave home syndrome, rather than years.

Picture yourself leading a team-up to 10 strong - of talented, intelligent, individualistic, obstinate programmers - all closely involved in systems definition. 'Emptying isn't it? Men and women, a quick phone call to Chris Hill on 01-953 2030, extension 3449, will do so to satisfy your curiosity - especially about those salaries - up to £9000 for the right people.

But a word of caution. With what he's got to tell you, you could end up feeling decidedly shaken. Not to mention stirred.

Marconi Avionics Limited, Elstree Way, Borehamwood, Herts. Alternatively call 01-207 3455 anytime (day or night) and we'll send you more information. Please quote reference MA 79127.

MARCONI AVIONICS
A GEC-Marconi Electronics Company

HAWKER SIDDELEY Brush Electrical Machines Ltd

Computer Programmers

We have vacancies for two Computer Programmers. Ideally applicants should have knowledge and practical experience of commercial programming particularly in COBOL, or a degree in computer science. However we will consider applications from graduates in other preferably related disciplines who can demonstrate a keen interest in a career in computers.

We offer an attractive salary coupled with conditions commensurate with a large and successful company.

Please contact Mr. D. G. Dawick, Assistant Personnel Officer, Brush Electrical Machines Limited, P.O. Box 18, Falcon Works, Loughborough, Leicestershire. Telephone Loughborough 63131 ext. 84.

Experienced Computer Operator

A Computer Operator with a minimum of 18 months experience is required for our Data Processing Department.

The successful applicant will have had experience of operating a computer and peripheral equipment similar to that in our installation.

Our current hardware configuration consists of a 128K I.B.M. System 3/15D and an I.B.M. 64K System 34. The system 34 is being extended to handle both local and remote terminals for real time processing.

We are looking for an operator who wishes to widen his or her experience in computer operations and play an important role in the development of our Data Processing Department.

Interested applicants should apply in writing to: Ina Clanshán, Playtex Limited, Playtex Park, Industrial Estate, Port Glasgow.

playtex

Lecturer in MANAGEMENT INFORMATION SYSTEMS

A Systems Analyst, Business Analyst, Accountant or Manager, with wide experience in the application of computer based technology is required to assist in teaching subjects related to the 'user' aspects of computer systems, computer applications in business and the theory and practice of management information evaluation. (Ref. No. 227)

Lecturer in SYSTEMS DEVELOPMENT

A Project Leader or Analyst Programmer with extensive experience in the development and implementation of commercial computer systems, on large main frames and/or mini computers, is required to assist in teaching the tasks and techniques of systems development, file design principles and high level programming languages, in particular, COBOL. (Ref. No. 228)

Senior Tutor in COMMERCIAL DATA PROCESSING

A programmer with extensive experience in COBOL programming, preferably developed using structured techniques, is required to teach programming concepts using high level languages. Applicants should also have some experience in a range of computer hardware configurations and/or other high or low level languages. (Ref. No. 229)

Senior Tutor in QUANTITATIVE ASPECTS OF BUSINESS

A graduate with qualifications and experience in the application of quantitative techniques in a business environment is required to teach business mathematics and statistics, management science techniques or operations research. Applicants should have hands on experience with computer terminal operation and be familiar with at least one programming language, preferably BASIC. (Ref. No. 230)

Qualifications: Applicants for lecturer positions should have a first degree and extensive relevant experience. Senior tutor should have a first degree and some relevant experience. It is desirable that applicants for all positions can demonstrate an ability to communicate in a tertiary level teaching situation.

Term: Contracts of 1-3 years duration will be negotiated with each successful applicant.

Conditions: Return airfares are provided for applicants and their families together with some assistance for removal expenses.

Applications: Details including the name, position titles and addresses of three referees, should be submitted not later than 24th August 1979 to the Migration Liaison Officer, Western Australia House, 115 Strand, London WC2R 0AJ, England. A brochure containing further information may be obtained from the above address.

When applying, please quote position reference number and the following media code CWS

Programmer

BP Nutrition (UK) is a successful and expanding company in the field of animal nutrition and related products.

We are expanding our successful Cheshire based advisory services which provides customers with a wide range of information on balanced diets and livestock production using a Dats Genrel Computer.

We are seeking a Programmer to undertake the development of new software particularly in the area of modelling livestock production.

We are seeking applicants with an 'A' level education or above and two years' experience of Fortran and systems analysis, including modelling.

The Company offers an attractive salary on a rising scale based upon merit, a non-contributory pension scheme, excellent lunches and assistance with relocation expenses.

If you would like to be considered for this post, would you please write giving previous qualifications and experience to:

Personnel Officer, BP Nutrition (UK) Limited, Stepfield, Witham, Essex.

BP nutrition

Southwork Progress!

in our new Computer Centre

Does your commitment match ours? - if it does then you will need to join us by taking on a wide range of VME/G systems, using a new 2Mb ICL2970 in a latest new Centre. We believe that makes us the place to be in 1980. So help your progression now!

Operations Manager

up to £8000 plus car allowance and up to £1000 relocation expenses. Ref: CW/8/8532.

Responsible to the Computer Centre Manager for all the aspects of the daily Computer operation and leading your team in further wide ranging development work.

Senior Operator

up to £8200 plus O/T (two shifts) Ref: CW/8/8533.

If you know the ICL 2900 well, then this is your opportunity to progress and we will give you every encouragement in your career.

We are a young friendly team with good social facilities and the full range of Local Government benefits including generous holidays, excellent staff canteen, pension and sickness schemes. Salary under review.

If you would like to know more or to arrange an informal talk, please ring Geoff Steggle on 01-703 6311 Extension 185, or ring 01-701 2870 any time (24-hour answering service) for an application form.

Please quote Reference Number and Job Title. Closing date: 14.8.78.

CITY OF SHEFFIELD

City Treasury

Computer Services Division

ASSISTANT SYSTEMS AND PROGRAMMING MANAGER

PIR - 17802 - £8349 (including supplement)

Should be suitably experienced and qualified persons for this senior post. The Computer Services Division is comprised of 103 staff, of whom 32 are attached to the Systems and Programming Section. The City Council is to replace its ICL 19048 (1924) computer by an ICL 2900 (2 Mb) in November, 1979 followed by an ICL 2872 (4 Mb) in January 1981. The successful applicant will be expected to play an important part in the conversion of existing systems and the development of a comprehensive management information system during this period. Further development will be concentrated towards a data base concept for which this officer will have special responsibility.

Applications, giving details of qualifications and experience, together with the names of two referees, should be sent to the Chief Personnel Officer, Palatine Chambers, Phoenix Street, Sheffield S1 2HN by the 31st July.

MYRIAD SYSTEMS IMPLEMENTOR (BASIC + PROGRAMMER)

C. LONDON

c £6500

With the imminent arrival of powerful PDP11 computers, our client is seeking an experienced programmer to assist in the co-ordination and implementation of major systems.

The company provides one of the most valuable advisory services to both Government and public bodies through the compilation and analysis of statistics and produces journals of editorial and factual comment.

Reporting directly to the Data Processing Manager, this is an ideal opportunity for a programmer to develop skills in analysis and sharpen commercial awareness. The position requires the successful applicant to become fully conversant with the systems currently being developed by a software house, and by extensive user liaison and user training, assist with the smooth implementation of the first system due to go live in early 1980.

Ideally candidates will be able to offer a strong background programming in BASIC+ and now looking to supervise programming teams and gain total systems implementation responsibility.

A good range of company benefits contribute to make this an excellent progression for the career minded professional.

Ref. N1/2807

MYRIAD APPOINTMENTS LIMITED
30 Fleet Street London EC4Y 1AA
01-353 0981 (24 HOURS)

£8,000+ p.a. and a full range of benefits

The spectacular success of Tesco - Britain's biggest retail group - means that our Computer Division continues to expand.

Following an internal promotion, we now require a Shift Manager who will be responsible for our IBM and ICL Computer Suites, which currently house an IBM 3032 (6MB) and 3 x ICL 1904s. Our list of Hardware attached to these processors is already impressive, and the Company is planning further investment in the near future.

You will be responsible for a team of ICL and IBM Operating Staff, and for ensuring that the Department meets its objectives, in terms of the work processed through the Machine Rooms.

You will have had IBM 370 experience, and you will certainly have been a Shift Leader for at least 3 years in a commercial environment, having had a minimum of 7 years operating experience. It would also help if you

have a knowledge of IMS/DB/DC.

In return for your contribution, Tesco offers a highly competitive salary, with excellent promotion prospects, since it is our policy to promote from within.

We also offer big company benefits - subsidised restaurant, country club membership, excellent contributory pension and, where necessary, relocation expenses. You will be working at Cheshunt, on the edge of the green belt and only 35 minutes from the centre of London.

To apply for this position - or for more information - contact Sue Horner, Personnel Officer, Tesco Stores Limited, Delamare Road, Cheshunt, Herts. EN8 9SL. Telephone 97 (Waltham Cross) 32222.

WILLIS

Computervision

Productivity is our Product

Computervision is the world leader in the design and manufacture of Computer Graphics Turn Key Systems, which is one of the fastest-growing high technology industries.

Our Computer-Aided Design/Computer-Aided Manufacturing (CAD/CAM) systems and comprehensive support services are helping customers to increase productivity worldwide.

We are a young, dynamic, highly profitable organisation currently embarked upon a major expansion programme to satisfy market demand.

Working at the forefront of modern technology, we can offer you a stimulating challenge, high job satisfaction, outstanding career opportunities and an excellent salary and benefits package.

CAD CAM Field Service Engineers

up to £8,000+ 2-litre car

* Derby * Manchester * Glasgow

The successful candidates will be involved with the installation, commission and on-going field activities in their respective territories and will need to be self-starters, used to liaising with customers and able to organise their own work.

Candidates should have a good knowledge of electronics and possess 2/3 years' field experience in the computer industry, preferably on mini computer systems and/or associated peripherals. Previous experience of CAD systems is not essential as product training will be given.

Salary will be up to £8,000 p.a. including profit sharing bonus, and the associated benefits package will include free BUPA and life assurance cover. Assistance will be given with re-location, if necessary.

Please send a detailed c.v., or ring for an application form, to:
Mike Enon,
Director of Personnel,
Computervision Limited,
Penn Straet,
Amarham,
Bucks.
Tel: High Wycombe (0494) 714771.
